

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

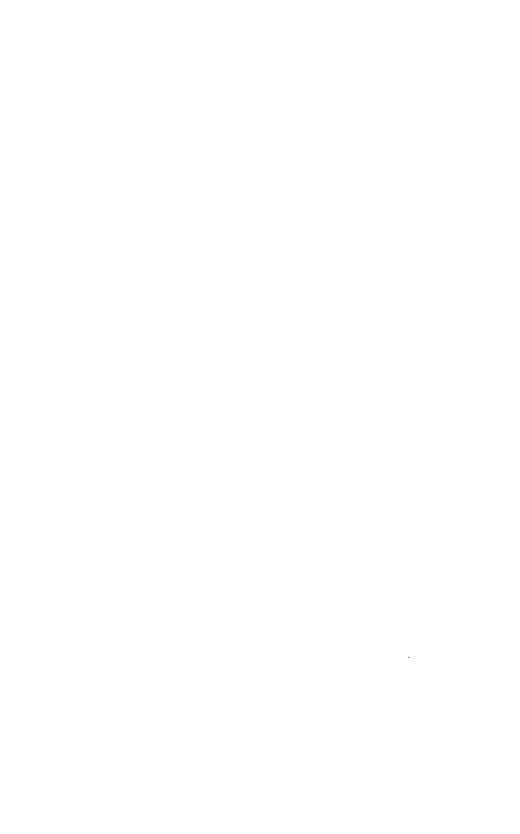

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

STATE OF MARYLAND,

Office of the State Board of Education,

Baltimore, January 14, 1886.

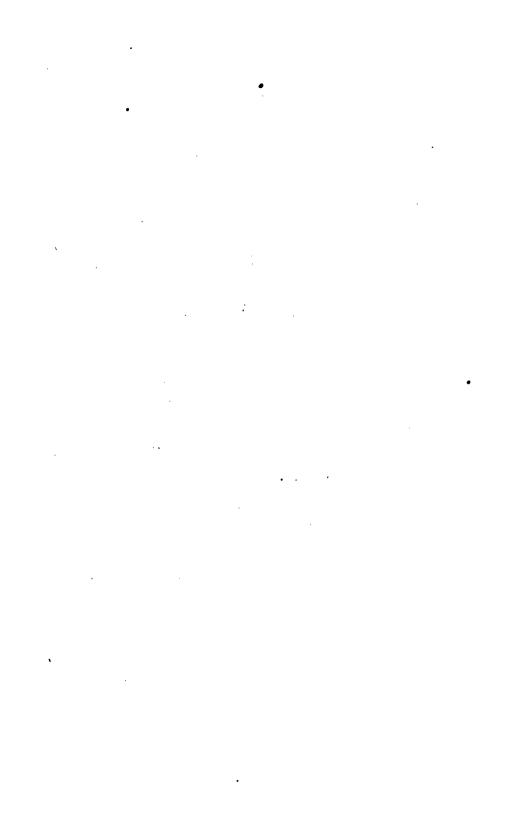

To His Excellency, HENRY LLOYD,

Governor of Mari

Governor of Maryland:

SIR: I have the honor to transmit to you the Annual Report of the State Board of Education, for the school year ending July 31, 1885, and the fiscal year ending September 30th, 1884, with accompanying documents as required by law.

Very respectfully,
Your obedient servant,
M. A. NEWELL,
Secretary.

BOARD OF EDUCATION.

The following summary, in connection with the accompanying tables, exhibits in a condensed form the most important facts connected with the administration of the public school system of the State, including the city of Baltimore, for the school year ending July 31, and the fiscal year ending September 30, 1885, so far as such facts can be presented in figures. The several items are compared with the corresponding items for 1884:

Number of schools in Baltimore city the counties	121 1,969

The progress of the schools during the twenty years that have elapsed since their first organization has been steady, though not rapid. It was necessary that they should have time to take root in the affections of the people before making much upward growth. For twelve years no changes have been made in the organic law, and this has given a feeling of stability and permanency which was wanting in the earlier history of the system. Such inconveniences as may have resulted from this fixity of form have been in a great degree relieved by the admirable provision of the law of 1874, which authorizes and requires the State Board of Education to enact by-laws for the administration of the system with the provision that they shall not be at variance with the school law. The State Board has from time to time indicated the changes which in their opinion would be beneficial, but the Board did not urge them, because they were of minor importance compared with the advantages arising from a settled condition of affairs.

The present would seem to be a suitable time for the General Assembly to take into consideration the amendments which have been suggested, most of which have also been approved by the Association of Public School

^{*} Excluding balances on hand at the beginning of the fiscal year.

Commissioners. No radical changes are called for. The system has come into its present form by natural growth more than by legislative enactment; there is no need to disturb the roots, while there may be some benefit derived from pruning the branches.

In his report for 1868, the Principal of the Normal School acting as State Superintendent, directed the attention of the Legislature to some defects of the law of 1868.

1°. The want of central authority to construe and enforce the law.

This was remedied in part by the law of 1870 and almost entirely by the law of 1874, which conferred ample powers on the State Board of Education.

- 2°. The inconvenience of an elective board of District School Trustees; this was remedied by the law of 1870, which gave the appointment of District Trustees to the Board of County School Commissioners.
- 3°. The need of an Assistant Examiner in the larger counties was pointed out. This was supplied by the law of 1872, which authorized the appointment of an Assistant Examiner in counties having more than eighty-five schools.
- 4°. It was shown that the number of County School Commissioners was needlessly large,—one to each election district. The law of 1870 cut the number down to three in the smaller and five in the larger counties.
- 5°. The effect of the law requiring the County School Boards to purchase all the text-books used and to sell or rent them to the pupils was shown to be unsatisfactory; and by the law of 1872 the mode of supplying books was left to the discretion of the School Boards.
- 6°. A hope was expressed that school books would be made free all over the State. This expectation was verified in Baltimore city a year ago. The counties will follow slowly perhaps, but surely.
- 7°. It was recommended that school-books should not be changed oftener than once in four years. This is still merely a recommendation.

The same report contains a prediction that "no change

of political parties will in all human probability ever disturb" the system of Free Public Schools "which is now a part of the settled policy of the State."

The Board of State School Commissioners, in its. Report for 1871, asks for the following changes in the school law of 1870.

- 1°. An increase of the maximum school tax to fifteen cents on the hundred dollars. This has not yet been granted: but less will not maintain the school efficiently, without burdensome county taxation.
- 2°. The appointment of teachers by County School Boards. This was given in substance by the law of 1874, which provides that all appointments shall be confirmed by the County School Boards.
- 3°. Provision for the education of colored children. The amount of \$50,000 was appropriated in 1872 and 1873; and since 1873 it has been \$100,000 annually.
- 4°. A building for the State Normal School. The Legislature appropriated \$100,000 for this purpose in 1874.
- 5°. The transfer of the Academic donations to the several Boards of County School Commissioners. This has been accomplished in most of the Counties by mutual consent.

The report of the State Board of Education for 1872 asks for no change in the school law, but additional legislation is recommended to provide the elements of education for idle, truant and neglected children. It says that the subject of high schools, in connection with State donations to schools and colleges, deserves the immediate and serious attention of the Legislature. A plan is proposed for the uniform gradation and classification of the District Schools. The need of a supervising agent to visit the counties, collect information and exercise the executive functions of the State Board is pointed out. The propriety of having a uniform set of examination questions for all teachers in the State is discussed.

The report for 1873 asks for a larger appropriation to colored schools. The appropriation was doubled by the Legislature in 1874, as has already been stated. It en-

dorses the recommendation of the Association of Public Schools Commissioners that Elementary Geometry be added to the studies in which all teachers should be examined. This was practically carried into effect in 1874 by a By-Law of the State Board.

The Board also adopts a resolution of the Association that "Drawing should be taught in all schools." This has not yet been accomplished, though considerable progress has been made. The report renews its "annual protest against the way in which the Academic donations are distributed" and lays down the following principles:

- 1°. No public money should be given to any college or academy which is controlled nominally or actually by any religious denomination.
- 2°. No public money should be given to any college or academy that is conducted simply as a private and personal business enterprise.
- 3°. No public money should be given to any school, academy or college, unless the State has a representation on the Board of management in proportion to the money expended by the State.
- 4°. Public money granted for one purpose should not be applied to any other purpose.

The report closes with a recommendation that the Governor and the Attorney General be added to the State Board of Education. The Legislature of 1874 adopted the suggestion so far as regards the Governor. There seemed to be constitutional objections to the Attorney General.

The report for 1874 mentions the adoption by the State Board of two important By-Laws:

- 1°. A uniform system of classification and a regular schedule of study for primary schools and the lower classes of graded schools.
- 2°. A knowledge of elementary geometry and physiology is required from all teachers after July, 1875.

The uniform schedule is still in use (with some improvements suggested by experience) and has contributed very largely to the improvement of the schools. The other By-Law has given us better teachers, and has greatly

stimulated the study of the branches named, among the pupils. The appointment of a State Superintendent in addition to or in place of the Principal of the Normal School, is again urged; and the employment of an Examiner or Inspector for every fifty schools is recommended.

Since 1874 no changes have been made in the school law; but several of the suggestions made in Reports after that date are deserving of recapitulation in this summary.

The Report for 1875 suggests that a State tax of two and a half cents be levied and applied to building purposes exclusively. It also recommends that a school census be taken annually in the city of Baltimore, and bi-ennially in the counties, for the purpose of ascertaining the number of children between certain specified ages who attend no school, and the number who attend other than public schools.

It calls attention to the subject of "High Schools. Academies and Colleges," and asks that at least a Commission should be appointed to examine the question and report to the General Assembly. It asks for an appropriation to purchase books for the library of the State Normal School, and apparatus for the laboratory. recommends that one copy of the School Report should be sent into every school district in the State. recommendations are as appropriate to-day as they were ten years ago. In the same Report the Secretary makes the following suggestions with regard to the Academies: and the suggestion is now repeated with all the force which ten years experience has added, for the benefit of the few remaining Academies which have not fallen into line with the public school system: "Require the Academies to do strictly academic work. Let their curriculum begin where that of the district school ends; and let the pupils be promoted from the lower school to the higher. after a strict examination. Make the Academy free to all who are qualified, and let the County School Board supplement the State donation, so as to give the principal of the Academy a living salary."

In the Report for 1876, attention is directed to the fact that the amount of \$451,398.47, reported by the Comptroller as balance due to the schools from excess of receipts over disbursements, was still undistributed. The greater part of this balance was wiped out by Act of Assembly in 1878. The same Report opposes the policy of appropriating money from the State Treasury to pay for the boarding of certain students at college; "of all the modes of giving aid to a college, that of giving rooms and board gratis to certain selected students is the most objectional in theory and the most unsatisfactory in practice." Part of such appropriation has since been withdrawn.

The Report for 1877 repeats the recommendations made in several previous Reports; it endorses the opinion of the Association of Public School Commissioners that the State needs a Superintendent of Public Instruction who shall be able to devote his whole time to the duties of the office, and approves the resolution of the same Association asking for a Commission to be appointed by the Legislature to investigate the condition of Secondary ecucation throughout the State.

The Reports for 1878 and 1879 have no new suggestions with regard to school legislation. The Report for 1880 reviews the progress made during the decade and shows that with an increase of population of $17\frac{1}{2}$ per cent. there has been an increase in the number of enrolled pupils of $47\frac{1}{2}$ per cent., an increase of $43\frac{1}{2}$ per cent. in average attendance; an increase of $33\frac{1}{3}$ per cent. in the amount paid for teachers' salaries; an increase of 21 per cent. in the total expenditure for public school purposes; an increase of 35 per cent. in the amount received from county taxation and a decrease of 18 per cent. in the expenditure per capita of enrolled pupils.

In the Report for 1881 previous suggestions respecting frequent changes of school books, respecting a school census, and the distribution of the State School Reports, are renewed, and an amendment to the school law is recommended, requiring the County Examiner either to

reside at the County seat, or to give two days attendance every week at the office of the School Board.

The Report for 1882 makes no reference to needed legislation. It discusses at some length the subjects of "School Examinations," "School Books," "The New Education," "Visitation of Schools," "Teachers' Institutes," "The Use and Abuse of the Rod," "Free Books for Free Schools," "Congressional Aid to Education."

The Report for 1883 makes mention of the great disproportion in several counties between the money received from the State for School purposes and the money raised by county taxation. Taking the amount received from the State as a standard, one county raises by county taxation more than twice as much as is received from the State Treasury; another nearly twice the amount; another one-and-a-half times; another nearly as much; another one-third; another one-fourth; another one-fifth; and still another (in 1885) raises by county taxation only one-eighth of what it receives from the Treasury of the State.

The Report for 1884 offers the following suggestions to the Legislature, as embodying some of the changes which experience has shown to be advisable:

1st. Necessary text-books for use in the school-room should be supplied without charge.

2nd. The State school-tax should be twelve cents on the hundred dollars, and the minimum county tax should be no less.

The State tax should be distributed to the several counties in proportion to the average enrollment of the pupils, white and colored, no pupil to be counted who has not made an attendance of at least sixty days (or 120 half-days) in the year.

4th. The few remaining county academies should be made a part of the public school system.

5th. There should be but one school district trustee, in place of three under the present law.

6th. Every principal of a public school should be

required to make report at least twice a month by postal card to the Examiner, of the condition of his school as regards attendance, etc.

7th. Legal provision should be made for ascertaining accurately once in every two years, in the city of Baltimore, and the several counties, the number of children of school-going age (say over six years and under sixteen), the number attending public schools, and the number attending private and denominational schools.

For the purpose of ascertaining more exactly the history of public schools in the counties during the last ten years, and learning their present condition and prospects from those who are best informed on the subject, and for the purpose of obtaining information about educational agencies and influences outside of the public school system, the following circular was addressed to each of the county examiners:

"The past school year completed the second decade of our public school system. I think the time propitious for making a retrospect, comparing the present with the past; and for indicating the prospect for the future. I ask you, therefore, to make in your annual Report, a much fuller statement than usual of the condition of education in your county, embracing public, private and denominational schools, high schools, colleges and academies. It will be published in full and will be valuable for reference, should the Legislature contemplate any serious changes in our school system.

It is not easy to indicate and describe the whole ground which such a report should cover; a program which would suit one county might not be equally well adapted to another; and much must therefore be left to the discretion of the several examiners. The following points are intended merely as suggestions and do not by any means exhaust the subject:

1°.—School-houses:—What they are, what they were, what they should be. 2°.—Teachers:—As they were and as they are. 3°.—Teachers' Associations and Institutes. 4°.—Teachers:—College graduates, graduates and students

of State Normal School. 5°.—Teachers who have had no training except in the public schools-their number and ability. 6°.—Number and influence of Normal teachers. 7°.—Libraries, school or district, or town. 8°.—High Schools:—Their influence; popularity; course of instruction. 9°.—Private or denominational schools. leges and Academies receiving State aid. 11°-Other colleges, academies and seminaries. 12°.—School trustees:— Their general influence; their special fitness for selecting 13°.—Attendance of pupils: ratio of enrollment to school population between six and sixteen years of age: ratio of average attendance to enrollment. 14° -Special studies, music, drawing, object lessons, calisthenics—to what extent pursued. 15°.—Higher branches. Latin, etc., to what extent taught in district schools."

It is to be regretted that all the Examiners have not responded to this request. The general conclusions which would follow from the replies given, however, would probably not be materially altered, if the whole of the information sought for were before us. The replies are printed exactly as received, leaving out the formal opening and closing, and inserting occasionally a paragraph from the regular Annual Report. Where no reply was received to the circular, and the Annual Report contained any matter not contained in the tables of statistics, this matter has been printed here and not in the body of the County Report.

ALLEGANY COUNTY.

H. G. WEIMER, Secretary.

SCHOOL HOUSES.

There are now eighty-three school buildings in this county of which seventy-six are owned by the county. Many of the better class have been erected within the past ten years and most of them are models of comfort and convenience when compared with the make-shifts which existed anterior to the present system of public schools. In the past decade great improvements have been made in some of the buildings previously erected. This work has been done for the purpose of adapting the structures to the uses for which they were originally intended, keeping prominently in view the important points of the health, comfort and convenience of pupils and teachers.

SCHOOL FURNITURE.

In this direction little change has been made in the old school houses, but the new buildings with few exceptions have been fitted out with the best and most approved kinds of furniture graduated to suit pupils of every size. If nothing else had been done in the past ten years, this, in my humble judgment would have been a marked improvement. It is absolutely painful to see pupils perched upon high benches with desks touching their chins. It is a pleasure to say that we have only a few left of this description and these few are too many. We hope before another year they will be replaced with some far better.

TEACHERS.

Our teachers at present are a conscientious class who labor earnestly and with telling effect. I cheerfully accord them this testimony which is fully corroborated by their works. Most of them made special preparation for their calling, either at the State or County Normal Schools. It is a difficult matter to find a teacher in the public schools of Allegany County who is not a subscriber to an Educational Journal, which shows their desire to obtain new ideas and suggestions calculated to improve themselves and advance their pupils. The few teachers who have failed to do good work were not always individually to blame. Investigation will show that such failures were chiefly attributable to a want of co-operation on the part of the patrons, and while it may appear superfluous, justice to the teachers compels me to say that while much depends upon their zeal, efficiency and self devotion, much also depends upon a proper appreciation of their labors, and willingness on the part of parents and guardians to assist in a work in which all should have a heart and a part, so that the pupils will bring to the school-room the air and manners of a virtuous home and carry to the home circle the intelligence and refinement of a well conducted school. As before intimated. there are but few of our teachers who have not been trained in the Normal Schools, and these have proven their capacity for the work assigned them and exhibit a disposition to fit themselves for higher grades in their The number of teachers now in the employ of the Allegany County School Board is one hundred and fifty-six, which is an increase of fifty-one in the last ten Average number of pupils enrolled in 1875, four thousand eight hundred and eighty-six. Average number enrolled in 1885, seven thousand eight hundred and fifty-four. Teachers Salaries, 1875 (\$27,352,) twenty-seven thousand, three hundred and fifty-two dollars. Teachers' Salaries, 1885, (\$45,672) forty-five thousand, six hundred and seventy-two dollars.

LIBRARIES.

Libraries have been established in the following schools of this county: Union Street and Lena Furnace in Cumberland, school No. 1, Frostburg, and in the schools of Barton and Flintstone. These libraries are of recent origin. The fact should not be overlooked, that much merit is due to the teachers' who have energetically labored to secure the appropriation necessary to the establishment of these libraries.

SPECIAL STUDIES.

Music, Drawing, Object Lessons and Calisthenics have have been pursued in some of the schools of this county but not to such an extent as to conflict with a thorough course in the other branches of education, in fact we deem them an advantage, and would like to see them pursued to a greater extent. Higher Branches, which includes Latin and Higher Mathematics are taught in Cumberland, Frostburg, Lonaconing, Barton, Mount Savage and Westernport Schools.

TRUSTEES.

So far as we are able to judge, the influence of the School Trustees is generally favorable to the schools, and judging from past experience we believe they conserve the property of the county and prevent an undue expenditure of money for incidentals. In selecting teachers they have generally done well and the School Board has carefully supervised and weighed each selection before confirmation.

INSTITUTES.

Teachers' Institutes, of which I speak generically, including local Associations, have been a feature and an important one in our school system for some time. In these Associations, and in the Annual Institute, new ideas are involved, and uncertain methods discussed, which discussions have invariably resulted in great good to the public schools and to the advantage of many

teachers. These assemblages are of a dignified character and serve to promote a feeling of good will and mutual respect among teachers who otherwise would scarcely meet in a lifetime to interchange a thought.

In closing this paper, may I not express the hope that the day is not far distant when the general public will recognize the noble work in which the teacher is engaged, and award him and her the due meed of praise, and work in sympathy with them to instruct the youth of the land, to elevate them in the scale of intellectual and moral manhood, and give to our beloved country a class of intelligent and law-abiding citizens.

ANNE ARUNDEL COUNTY.

WM. HARWOOD, Secretary.

"There is, we believe, a gradual improvement in our schools, although we want as yet many things for their satisfactory equipment.

"Our colored schools especially are cramped by the want of a more liberal appropriation, which we shall endeavor to obtain from the next Legislature. An addition of a hundred thousand dollars to the present appropriation for the schools would be a trifle for the State of Maryland to contribute, and would enable us to build school-houses for them, and give them schools in some districts where they are now without them. A larger provision for supplying thoroughly educated teachers appears desirable, and I suppose this will come in time."

-Annual Report.

BALTIMORE COUNTY.

THOS. C. BRUFF, Secretary.

This has been a year of marked success in the public school history of the county. The increase in the number of different pupils attending school is greater than ever before, the total number enrolled was 14,783; for the previous year it was 13,540, the increase being 1.243. Considering the rigorous winter and spring, the average attendance is also remarkably good, being about seventyfour per cent of the enrollment. The total cost of the schools was \$180,270.40; deducting the amount paid for building, furniture and repairs which are permanent investments, there is left the sum of \$158,034.18 for the actual running expenses. Dividing this amount by 10,726. the average number of pupils enrolled and the cost per pupil is \$14.73 as against \$14.77 for 1884. Three new schools have been established for white pupils and are now in successful operation. School 14, district IX, is located at Mt. Vernon, in a hall rented for the purpose. This school numbers over three hundred pupils and the house is entirely inadequate for the needs of the school. Another known as School 8, district VIII, is on Chestnut Ridge, between Timonium and Shawan. The third. known as School 15, district XII, is on Eastern Avenue near Back river bridge. These two are new frame houses 24x36, with vestibule and together with their sites are the property of the Board.

During the past decade much money has been expended on school-houses. Substantial brick or stone buildings now replace many of the old-time frame shells which were as a rule miserably located and built. These houses

need only to be seen to be known forever thereafter. They are fashioned after the same plan, if such it may be called and a vestibule 4x6 for an entrance is the only thing to relieve them from being mistaken for a barn or In this age of progress the schools should be in School-houses should be substantial, ornamenthe van. tal and commodious; they should be located on the most central and desirable sites to be found in their respective neighborhoods; the play-grounds attached should be ample and should be separated for the two sexes so as to make them entirely private; they should be supplied with comfortable furniture, and be properly ventilated. heated and lighted, in fact a good school-house to be attractive should have all the comforts and conviences of a good home. In former times anyone acquainted with the three "R's" might keep school, and many and varied were those who availed themselves of an opportunity to wield the birch, and at the same time put a few dollars in their pockets when they could do nothing else. But with us all these thing have passed away, and the teachers as a corps are intelligent and wide awake. There may be still a few sluggards in the number, but as the public becomes better acquainted with the duties and responsibilities of the teacher's work they silently drop from the ranks and the professional teacher moves to the front. These are supplied from the Normal School, College or our own Public Schools.

Of the two hundred and sixty-four white teachers employed, one hundred and fifty-six have made special preparation for teaching, fully ninety per cent. of the number being graduates of the Maryland State Normal School. The demands for scholarships in this institution is so great that the Board have to resort to competitive examination, and many applicants are turned away each year. This large body of trained teachers has exerted a silent influence for good all over the county and given to the system an impetus that must keep it moving in the right direction. In adjoining schools a friendly spirit of emulation is often aroused, and side by side you will find the

Normal teacher and one who has not had these advantages laboring faithfully to improve in their work. There are a number of the latter class who after years of experience and hard study stand at the top of the profes-The "esprit de corps" among the teachers has been much improved by the aid of a Teachers' Association held four times a year at the close of each term. This association is organized and conducted by the teachers themselves. One school day is given for each meeting, an attendance made compulsory by the Board. The exercises consist of lectures, discussions, queries, essays, readings, music and much of the practice work of the school-room is exemplified. In this way social intercourse is cultivated among the teachers and the friendly feelings are taken with them to their homes. On the whole County Associations are calculated to do more good than institutes held but once a year. There are no high schools in the county, all the schools are graded and the grades are numbered from one the primary, to seven which embraces a high school course. It takes about eight years to complete the full work of the grades, and the curriculum from top to bottom contains nothing ornamental or superfluous, the object being to place within the reach of every child a good practical English education. A country school with one teacher may be teaching the same branches as the village school with seven teachers, with this advantage in favor of the latter, that in the small school the teacher must do all the work himself; while in the large school an assistant may be employed for each grade, thus dividing the work and giving more time for individual instruction. an advantage that numbers and locality give, and which cannot be equalized by any rules or regulations. special studies such as music, drawing and calisthenics. and the higher branches, Latin, etc., are left to the option of the teacher, who is expect to consult the wishes of his patrons in these matters.

Our finances are about in the same condition as reported last year. The deficiency still exists and although the

County Commissioners made a liberal levy for the running expenses of the schools, not one cent was given to relieve the Board from its financial embarrassment. The schools are kept in operation for the full ten months required by law by exhausting the School Board's treasurv to pay in full the expenses of the Summer, Fall and Winter terms and borrowing to bridge over the Spring term, paying the obligation from the next levy which is made on or before the first day of May in each year. get the benefit of the liberal discounts allowed for the prompt payment of taxes the bulk of the levy is collected in May. This enables the Board to take up its notes at from thirty-five to forty days, but it is done at the expense of the schools for the next ensuing year. The following loans were made by the Bank of Baltimore at various times. November 15, \$10,000; February 19, \$15,000; April 24, \$35,000, and these notes were paid in part from what remained due from the County and State to April 15, 1885. The balance \$39,998.28 was paid from the levy of \$107,000 made on the first day of May, to run the schools for the next twelve months. Unless the Board is relieved in some way it will be in a similar position next year, and if this is allowed to go on there is no telling where the schools may drift. It is for others to say how the relief shall come. It may be accomplished by a special levy, over and above the running expenses, or by closing the schools for one term. The first is to be preferred but if this is not acceptable to the people of the county let the schools be closed for a short time and the Board enabled to get back to a sound financial footing once more. It is absolutely necessary for the future welfare of the schools for some active measure to be taken at once.

CALVERT COUNTY.

J. B. DUKE, Secretary.

No reply to the circular has been received.

CAROLINE COUNTY.

JAMES SWANN, Secretary.

No reply to the circular has been received.

CARROLL COUNTY.

JAMES DIFFENBAUGH, Secretary.

An increasing school population and a diminishing school revenue; a debt of about \$8,000, unavoidably contracted, in part for the payment of teachers' salaries, in part for necessary school supplies; clamorous appeals from almost every section of the county for extensive repairs to decaying school property, and for new houses to replace old ones no longer fit for use, or to accommo-

date new districts made necessary by increasing population; these unwelcome facts confronted the School Board now in office when they assumed control nearly two years ago. A close scrutiny of the school property and school management was immediately begun to the end that every dollar due the Board might be got and made go as far as possible.

A number of unnecessary expenses were discovered and rigidly pruned away. Gross negligence in the collection of book fees, resulting in great injustice to those who paid them and considerable loss to the Board, was found and corrected. The teachers were in the habit of collecting what could easily be got and taking no notice of the rest. It was at once determined to surround the teachers with every protection which the law could give them in the collection of these fees, and then charge them with the fee of every pupil except those who should have their own books or bring to the school, from the trustees, a written permit of exemption. In the next term of school pleasant spring weather called many of the larger pupils into the fields to work, so that the attendance was about one-eight less than that of the preceding term, but the book fees amounted to fully onetwelfth more; and for the year which followed they amounted to \$1.615.62 more than in the preceding year.

At the close of the spring term came a careful and impartial examination of the teachers whose certificates would expire within the next school year. This resulted in a re-adjustment of the pay-roll and an annual saving of about \$2,240.

The saving thus effected, continued through two years, with a donation from the County Commissioners of \$600 for building purposes, have enabled the Board to pay half of the debt of \$8,000 mentioned above; to keep the schools liberally supplied with books and stationery; to make extensive repairs to the school property, to refurnish some houses throughout; to open and conduct two new white and four new colored schools; and to provide and equip eleven new school-rooms, of which one was

purchased for \$600, two were leased for a term of years, and eight were built of brick at a total cost to the Board of about \$600 each, exclusive of ground and furniture.

The amount expended for repairs to school property in the two years is \$2,559.37; the amount for new furniture in the same time is \$1,724.39.

The multitude of business details thus passing under necessary review, and the unexpected difficulties in the way of effective administration created by the want of proper care and business capacity in many of the teachers, have prevented that close attention to the management of the schools, the course of study and the methods of teaching, which is felt to be necessary. Nevertheless these things have not been wholly ignored.

The first inspection of the schools disclosed that a great variety of text-books on the same subject were in use, and that there were almost as many methods of grading as there were teachers. The books, grading, discipline and daily order of exercises were made uniform throughout the County.

Examinations at stated intervals, as a guide for the promotion of pupils from one grade to another, have been introduced, and give promise of excellent results. The questions are the same for all the schools, and are so prepared by the County Examiner as to be within the actual limits of the grade. An average of sixty per cent. in each study is required for promotion.

The first examination was held in January last. The number of pupils examined was, in the 1st grade, 908; 2d, 898; 3d, 1,029; 4th, 592; 5th, 296. The number promoted was, from the 1st grade, 165; 2d, 192; 3d, 98; 4th, 51; 5th, 18. 430 pupils made 60 per cent.; 318 made 70 per cent.; 160 made 80 per cent.; 48 made 90 per cent.; and 4 are reported to have made 100 per cent.

The second examination will be held on the 4th, 5th and 6th of November. An increase in the number of promotions and higher percentages is confidently expected.

The scope of my remarks is already extended to cover a period twice as long as is usually embraced in an annual report. I shall ask still further indulgence for a few suggestions growing out of the observation and experience of the time under review.

We need urgently not less than fifteen new schoolrooms to replace old ones scarcely fit for longer use, and at least six to accommodate increasing populations within districts already formed.

We need improved sanitation and greater care in the selection of furniture, to remove fruitful causes of discomfort, fretfulness and ill-health.

We need internal decorations of the houses, shade trees and other ornamentation of the grounds, to make the schools as attractive to pupils as their homes, and the property as much revered and as safe from wantonness as the churches.

We need a generous supply of charts, globes and outline maps, dictionaries and other works of reference, to aid progressive teachers in making progressive schools.

We need a well selected school library in every school district.

We need a system of census enumeration to learn how many children of legal age are kept out of school, and why they are kept out so that proper steps may be taken to secure their attendance if possible.

These seem to be costly necessities, but they are necessities none the less. Wise administration, aided by local pride and judicious administration, will in time secure them all.

We need above everything else in this county MORE TRAINED TEACHERS; the theory and practice of teaching is here almost an unknown science. Some of our teachers have had special training, and their superiority is patent to the most casual observer. Others who have had no special training, have studied their profession, and their superiority is equally manifest. But most of our teachers have no special fitness, many of them no general fitness, some of them no fitness at all for the work of teaching.

How this shall be remedied is the problem awaiting the attention of the next School Board. A vigorous, inquisi-

tive, zealous Teachers' Reading Circle in every district, with several of the best school journals on its table, would do much of the preparatory work. Normal instruction as occasion should offer would materially aid. But I conceive that on intelligent, conscientions unflagging supervision must be the main reliance for help in this matter; and therefore upon the shoulders of the County Examiner will rest the heavier part of the burden.

Yet notwithstanding the real needs which crowd upon us, and our poverty of resources, past and present, a retrospect of the twenty years during which the present school system has been in operation, exhibits a gratifying growth of public sentiment in favor of educational forces and a gratifying increase and improvement in educational facilities in this county.

In 1865 the only brick public school-houses in the county, so far as I have been able to learn, were the two dilapidated little shanties which furnished the only public accommodation for the school children of Westminster. In the country a few primitive and squatty log cabins. erected in most cases by private generosity on rejected hillsides near the cross-roads, or on scant spots of ground useless for any other purpose, and rudely furnished from the surrounding woodland, were the only resource of an eager, inquiring and ever growing school population. The School Board now owns sixty-three houses of brick containing eighty-two rooms, eight of stone and twentythree of frame, all built since 1864. There are still in use ten of the old log-houses in various stages of decay, and four additional rooms are rented. There are also ten houses occupied by colored schools of which four belong to the colored people, and are given for the schools free of charge, and six are rented by the Board.

The furniture throughout the County is a 150 g ood. Only one house still has slab desks and seats, which would have been replaced by modern ones if the erection and equipment of a new house were not already in prospect.

The meagerness of the funds available for building purposes has prevented any attention to architectural

adornment. In some cases durability, and even the plainest sanitary provisions have been sacrificed to expediency and false economy. But in the main, the houses erected by successive School Boards are comfortable and substantial.

There has doubtless been a considerable improvement in the qualifications of teachers and the methods of instruction, though the advance in these respects has come far short of what it should have been. natural and logical result. It cannot be expected that a salary of from fifty to ninety dollars for a term of ten weeks, will attract first-rate talent, or secure the services of trained minds when every other field of labor offers superior inducements. Despite the proverbial ingratitude of republics, good ideas and capacities, in a growing country, usually find a ready market. Many young men, and ladies too, of such ideas and capacities, after using the schools for a year or so to keep body and soul together have eagerly turned their hopes and energies into more remunerative employments. Many more of even better promise and capabilities, have never been drawn into the schools at all to teach. Thus we have lost those whom the small salaries failed to keep, and the larger number whom the small salaries failed to get.

But this will not continue. The demand for better houses, better furniture, better books, better teachers, better methods of instruction, grows daily more urgent and more extensive. An inquiring public sentiment begins to realize that these cannot be had without better pay. Many trustees refused to employ any but first-class teachers. In some districts, school patrons have cheerfully given of their private means to secure teachers of especial merit.

In addition to the public school facilities, a number of higher institutions and private schools enrich the County.

Western Maryland College, at Westminster, New Windsor College, at New Windsor, Irving Institute, at Manchester, and Prof. Reisler's High School, at Union Bridge, for students of both sexes, and Springfield Institute, near

Sykesville, for ladies only; all located on commanding elevations, in regions of great healthfulness and amid scenes of surpassing natural beauty, attract within their doors enough students to keep them in good working order—Western Maryland being the only one which receives aid from the State—and supply the want of high schools, which but for them would be seriously felt. Their course of study is that usually found in schools of their scope. They number in all about forty instructors, and about four hundred pupils in average attendance. They all seem to be growing in popular favor and in general usefulness.

Very respectfully yours,

JAMES A. DIFFENBAUGH,

Secretary.

CECIL COUNTY.

REV. J. SQUIER, Secretary.

"The schools have been opened only eight months and a-half, owing to the lack of funds. It is difficult to make the schools what they should be, while the Commissioners are always embarrassed for the means to do so. We respectfully ask the State Board to urge upon the Legislature a more equitable method of distribution of the State School Tax, as there seems to be some defect in the present method; the burden of all deficiencies in the financial affairs of the State appears to fall upon the School Fund."—Annual Report.

CHARLES COUNTY.

A. W. NEALE, Secretary.

The completion of the second decade of existence of the present Public School system furnishes but little from this County, supplementary to the annual reports that have been regularly made to the State Board of Education during that period. There are but two schools in the County outside of the Public Schools: one a female academy, known as St. Thomas' Academy, and the other is a parochial school under the patronage of the Pastors of St. Mary's Catholic Church, near Bryantown. St. Thomas' Academy is both a boarding and a day school, with some ten or twelve boarders, and five or six day scholars. Catholic in denomination. This school has been in existence some fifteen years, and though small in the number of pupils, has done excellent work. St. Mary's parochial school, near Bryantown, has an enrollment of about forty pupils. The instruction given is about the same as in the public schools. About onethird of the old-time school houses are still in existence -the best of them; the other two-thirds have been replaced by new and better houses.

The old houses were frame and log; small, low-pitched and unsightly, and only ventilated by the crevices in their walls and floors, and ill-fitting doors and windows. The new houses are all frame, and in their construction particular attention has been given to having good height of ceiling, close fitting doors and windows, and sufficient ventilation from above and with as much regard to an attractive architectural appearance as the means at command would permit. Twenty-three new houses have been

built during the last decade, and the old furniture in use at the inauguration of the present system has been almost entirely replaced by new and modern furniture. The majority of teachers in the County have been scrupulous in the discharge of their duties, and performed efficient service in the schools, and there has been much improvement in method of instruction and discipline over the old time pedagogue; but there are still some who are not all that they should be. This is in a great measure due to those who exercise the direct appointing power and will be referred to again when we reach the subject of local Trustees.

Of the forty-three teachers of white schools on roll for the quarter just ended, twenty-six have had no training. except in the public schools; fourteen are either college graduates or were college students, and three were Normal school students or graduates, and this proportion has varied but little during the last decade. As a rule, college and Normal school graduates and students have furnished the best teachers: though some teachers who have had only public school training, have done quite as good work as any of the others. The fact, however, remains that the greatest ratio of indifferent teachers comes from the latter source of supply. The influence of a Normal teacher is readily perceived by the Examiner in the order and method in the school-room, even though the pupils are no further advanced than in some of the other schools. There are no High schools; no school, district or town libraries; and no college or academy in the county receiving state aid to report. The average ratio of attendance to enrollment has be enabout thirty-five per cent. for the The causes for this small percentage of two decades. attendance are obvious: the population is thinly scattered over a wide territory; there are no large villages with pupils convenient to attendance in all weather; the population is almost entirely agricultural, and needs the services of the children at home during a good portion of the school year, and in many instances, particularly with our colored people, parents are unable to properly clothe and

feed their children for school going. Our colored people manifest deep interest in their schools, send their children in many instances at great sacrifice to themselves, and with such clothing and food as very few white parents would be willing to do. But few special studies are taught; some drawing, a few of the higher branches, and some few pupils study Latin. The proportion of young people who leave the county for higher education is small; but those who do, go mostly to Georgetown University, St. John's College, Charlotte Hall Academy, St. Mary's County, Rock Hill College, Howard County, for boys and to Georgetown Academy, Mount De Sales. St. Joseph's, Emmettsburg, for girls; the State Normal School also receives its share. There has been no Teachers' Institute for several years; the necessity for new school-houses, new furniture and the occasional falling off in the State School Tax not leaving available funds in County Treasury for that purpose. Teachers' associations, white and colored, are sought to be held every quarter, but there is not a desirable degree of interest manifested by teachers. The colored association has been organized within the last two years and the colored teachers evince much more interest than the white. The effect of the schools upon the colored people is not such as the friends of education may have hoped for; but is as much as may have been reasonably expected under the circumstances. Another generation must pass away before a correct judgment can be formed on this subject. The children of those who have been educated, imperfectly though it be, have not yet commenced attending school; consequently the home influence on those who are now pupils is about the same as when emancipation first took place. Until education does reach and have its effect on the home, it is scarcely reasonable to expect much improvement in morals or manners. Some advancement is however perceptible in both, and we may be satisfied as yet to "make haste slowly." Shool Trustees as a general thing manifest but little interest and it is often difficult to get them to attend

at all to many of their duties. In one way they have occasioned great detriment to the schools and that unfortunately in the discharge of their most important duty viz.—in the appointment of teachers. In this respect they are often influenced (and perhaps not with a purpose of doing wrong) more by a desire to get in some friend or relative as a teacher, than for the best interests of the Some no doubt act with a full consciousness of wrong, and some timidly yield to importunities for fear of giving offence. School Boards might correct this evil by exercising with more scrutiny their confirmatory powers and firmly and persistently sending back unworthy appointments. The general disposition and attitude of the people towards the School System is undoubtedly most favorable. As an evidence, although burdened with one of the highest rates of county taxation in the State, they this year cheerfully granted two cents on the hundred dollars additional school tax.

We have made some progress both in enrollment and average attendance; increasing the roll by forty, and the average by 106. This is a fair showing in a purely agricultural community, where a large portion of the school population are agricultural laborers as well. We have also done considerable building and furnishing, and we may soon congratulate ourselves upon having buildings and furniture suitable for school purposes. The last log school-house in Charles county came to a violent end during the year having been destroyed by fire. It had already been doomed to destruction by the School Board, which was only awaiting the end of the scholastic year to proceed to its demolition.

Everything has worked smoothly and pleasantly during the year, and if the coming Legislature can so arrange the State School Tax as to put the White Fund on a basis of distribution as unvarying as the Colored Fund, one cause of complaint heretofore existing will have been permanently removed.

DORCHESTER COUNTY.

DR. J. L. BRYAN, Secretary.

On the 12th of November, 1864, the Rev. Lebertus Van-Bokkelen, D. D., was appointed State Superintendent of Education, with power and direction to draft a School Law, for the State of Maryland, and to present it to the Legislature next ensuing. The duty was a most difficult one to perform. There had been no State School System before in Maryland, and to make one, the Superintendent had to go to other States, notably, the Northern and Eastern ones, for examples of what a State System should be. Selecting attractive and useful parts of various State School Laws, he had to adopt them to our peculiar situation, as regards population, classes, habits, customs, etc. Notwithstanding the difficulty, a School Law was formulated and presented to the Legislature in due time, and from the name of the Superintendent, has always been known as the Van Bokkelen Law. The report contained an elaborate School Law, with an appendix containing explanations, etc., of all its parts and arguments in defence of suggestions that were likely to need explanation.

Although the law, as submitted, was greatly modified by the Legislature, curtailing parts that were not considered of immediate necessity, the main features and organization consequent upon them were retained. The State organization consisted of a Board of Education, with a State Superintendent and for the preparation of teachers, a Normal School was deemed absolutely necessary.

The county organizations were the fore-runners of the present ones, except that their appointment was in the

hands of the State Board, assisted by the Superintendent. This arrangement was not popular, and it may now be said, was not as appropriate as the present mode of appointment. The State Board was too far removed from the counties, to be as well prepared to name each county's School Board, as some local appointing power. popular elections, however, of these officers, were avoided in this first arrangement and this wise conservatism has prevailed nearly ever since. Mistakes doubtless were made in the selection of County School Commissioners, as the members chosen were not in political sympathy with the large majority of the tax-payers of the counties. Dorchester County, however, though the Board was appointed from the members of this minority, yet the selection was a good one and the members deserve the lasting gratitude of the people for the broad foundations they laid for the system in this county, of this original Board, Robert F. Thompson and John G. Robinson, now of Baltimore, alone survive.

After twenty years work under this Van Bokkelen Law and the laws of later date, it cannot be denied, that it was the best law and it would have been better for the cause of education, had it been retained.

As the schools in existence at that time were almost universally pay schools, in which fees were collected to defray expenses and pay the teachers' salaries. (with a very small addition from a county tax and the annual revenue from a small State School Fund) they were not properly pulic schools; as the advantages and these were "precious few" were confined to the pupils, whose parents could pay the fees, such poor and irregular sources of income, with no means of ascertaining the capacity of teachers, bore the natural fruit of poor, wretchedly poor schools, conducted in most cases, by poor apologies for The houses were almost universally unfit for teachers. places of instruction, with none of those conveniences of single or double desks, blackboards, maps, etc., now -deemed absolutely essential to the humblest rural schoolhouse.

The preliminary report of the President of the Board. Dr. E. F. Smithers, stated that there were about thirtyfive of these nominal schools collected in such houses as I have described above or in the more roomy but colder and more uncomfortable meeting houses, scattered about this large county. The pupils numbered less than one thousand, although the census called for over 7,000 children of the proper age to attend school. The teachers. in most cases, were young men of some education, it is true; but who taught simply to get a little money, to engage in some other occupation; or old men, dissipated men-failures in other associations who, with a smattering of the lowest branches taught in the schools, were considered good enough to teach all who were sent to them. Text-books were almost as various as the pupils attending a school, and the education obtained, even under the best of the teachers engaged, was meagre in the extreme.

With such poor material to work with, it is not surprising that the School Commissioners, earnest and energetic as they were: but ignorant of what constituted a proper school system and even of the essental elements of such a system, should have made great mistakes, thus all of the old teachers were retained at increased salaries, and although, some houses were built, yet fear of extravagance, so modified the plans recommended by the State Board, that they have needed great changes or their unfitness has demanded new buildings, of better and more appropriate plans. The President of the Board in 1866 thinks "ten or fifteen new buildings are needed to supply the demands of the county." Time has shown that the number should have been fifty or sixty, as we have built over fifty houses for white schools-in addition to the houses erected in place of the old structures, misnamed school-houses in use before—and also without counting about thirty more built for colored schools—schools unknown to our people in 1865.

In February, 1867, in consequence of the resignation of Robert F. Thompson, Esq., as President, (the successor of Dr. E. F. Smithers, who had died in office), I became

President, at the request of the State Board of Education, and continued in office, as President until 1868, and since as Examiner, under the laws which constituted that office with the executive duties of the County Boards. This long continuance in the office of a virtual superintendent enables me to make comparisons that are most creditable to the school authorities of the county, of the teachers and pupils attending the schools and to the entire people of the county who have so patiently borne the large tax needed to carry out the school work and to provide the needed houses.

My first work as Examiner was under the law of 1867; after these many years, I can safely say that a worse law could hardly have been made. The State Superintendency was abolished and great efforts made to abolish the Normal School. Had not this essential institution been retained in the system, and its principal made a virtual Superintendent, the whole admirable system arranged under D. Van Bokkelen would have dropped to pieces. and brought such confusion in the work, that public education would have received almost a fatal blow. While the duties of Superintendent and principal of the Normal School were too much labor for one man to perform, yet the principal, with such aid as he could get in the Normal School faculty, has ably performed the arduous duties of his office, to the satisfaction of all concerned.

The school-houses now in use are large, well lighted, ventilated and heated, with proper double desks in nearly all the schools, with patent furniture. In all blackboards slates and maps. The poorest school-house in the county now is better than the very best formerly used. For the broken-down, or unfit teachers of the old time, we have a bright, well-educated, earnest, energetic young men and women, who are pronounced competent to teach in our schools after graduation at the Normal School, or after thorough examination by the Examiner and after at least six months' management of a school under his observation. Married ladies cannot teach in our schools.

TEACHERS' INSTITUTE AND ASSOCIATIONS

form a part of the methods employed in this county, to keep alive the interest of teachers in their work and to furnish new methods and higher instruction to some who may not have had normal or collegiate training. The good results justify their continuance and extension.

Our teachers are mostly obtained from our own schools, many however are from the Normal School and the various colleges of the State, while more than half have been connected with our three High Schools and Academies and the Cambridge Female Seminary.

The number of the graduates of the State Normal School and of those who have attended that institution, without graduating, has been large enough to affect advantageously the great body of teachers in the county. It would be well if all teachers were required to attend at least one year's instruction in that school.

SCHOOL LIBRARIES

have not been as extensively adopted as one might suppose, considering the very liberal aid to be given by the School Board, conditioned only upon a like sum being raised by the teachers and patrons of the schools. The number though is sufficient to show the benefits of such aids to the teacher in attracting the pupils to the schools and furnishing some reading matter to families, too frequently, without any books whatever.

THE CAMBRIDGE, EAST NEW MARKET AND VIENNA ACADEMIES

for both sexes of pupils are true High Schools, well located and having courses of study, much higher than the schedule adopted for the general public schools. Latin, Greek, German, French, higher mathematics, Philosophy, Physiology, etc., are taught and pupils prepared to enter college in somes cases, in the sophomore and junior years. These academies are popular and students from distant parts of the county attend them, boarding in the towns where the schools are located.

There is but one private school in the county, a good

one for young children, taught by a most excellent teacher, and located in Cambridge.

The Cambridge Female Seminary, though not under the control of the School Board, is assisted by the State, to an amount enabling the trustees to fix the rates of tuition, at a moderate price. In addition, ten or twelve pupils are admitted free of charge. The institution, though not largely attended, is one of a high grade and its graduates have increased our corps of teachers, to the satisfaction of the School Board. If it could be made a free High School for girls, its beneficial influence would be greatly increased. The Academies and the Female Seminary receive from the State, seventeen hundred dollars.

DISTRICT TRUSTEES

receiving no pay for their services with very little to do, except appoint a teacher, cannot be expected to take much interest in the schools, and so they don't disappoint the County School Commissioners, who expect very little from them. The truth is, they are wholly unnecessary, and are, frequently from caprice or obstinacy, troublesome. Their duties should be transferred to the County Board and one year's experience would soon prove the wisdom of the change. In the Van Bokkelen law, there were no such officials.

Our annual report shows that the enrollment is about five-eights of the school population; that is, of all-between five and twenty-one years of age. These years are so far apart that the enrollment ought not to be compared with such population. The proper ages should be from six to seventeen years, and then the enrollment would be a large fraction of that population.

The attendance is six-thirteenths of the enrollment; a very good per cent., as the demands of labor are such that children cannot be spared from the field or home work. The saving of the berry crop and fruits generally almost close the schools in some of the districts, while in others, the catching, culling and opening of oysters, withdraw

large number of boys from the school during the fall and winter terms.

Music, drawing, object lessons, calisthenics, etc., are not taught as well or as extensively as their importance demands. Every effort has been made to increase the interest in drawing and music, and it is believed that better results may be expected in the near future. As stated before, the higher branches of education, Latin, Greek, Modern Languages, Mathematics, etc., are taught in the Academies and in the Female Seminary.

Some recommendations are made in the report of the undersigned for 1884, and the State Board, for the same year, give their approval to some of these and add others.

Reference to these reports might be of service to the committee charged with the consideration of the cause of education in Maryland.

In addition to these suggestions, the provision for assistant teachers, should be so modified that in the rural schools—a smaller average attendance than fifty pupils should entitle a school to an assistant. In cities and large towns where the schools are properly graded, no change is needed; but in a country school—with at least six grades of pupils—it is impossible for one teacher to do her duty in a school numbering probably seventy pupils, for that number should be enrolled, so that an average attendance of fifty pupils should be reported.

The Annual Report for 1885, ending September 30th, puts the white schools at 81, colored, 29; white teachers, male, 45, female, 50; total, 95. Colored male, 25, female 8; total, 33. Different pupils for the year, white 3,701, colored, 1,558. Average attendance, white, 1,778, colored, 622. That is, that we now have over five times as many pupils attending school as in 1864, and the teachers four times as many.

JAS. L. BRYAN, Examiner.

REV. L. D. TRAVERS, President, EDWIN DASHIELL,

ROBERT I. PRICE,

W. W. MACE, John N. Wright,

School Board.

FREDERICK COUNTY.

D. T. LAKIN, Secretary.

"We were enabled to keep our schools open seven and a half months during the scolastic year ending June 30th, 1885. Last year we ran them but five and a half months.

"This, I am glad to state, is not the only evidence it gives of renewed life in our educational interests. Last year we received twelve and a half cents on the hundred dollars, from our County Commissioners, against ten cents, heretofore, for school purposes.

"Although the two and a half cents increase only restores to as what we lost from the State on the late census, and by the shrinkage in our county basis, it enabled us to regain our lost ground.

"This, together with the fact that the County Commissioners have built eleven new school houses, containing in all fourteen rooms, all substantially built, and furnished with modern desks, etc., gives us just cause to hope that a new era is about to dawn upon the public schools of Frederick County.

"The increase in our enrollment and average attendendance is in harmony with the improvements noted in other respects.

"Our total enrollment for the year ending September 30th, 1885, is 9,711, last year it was 9,223, gain, 488. This year we average 5,309, last year 5,191, increase, 118.

"We have arrived at a point in this county where "High Schools" have become a necessity, and they will be provided just as soon as our people are willing to pay the money necessary to maintain them."—Annual report.

GARRETT COUNTY.

C. B. LUDWIG, Secretary.

No reply to the circular has been received.

HARFORD COUNTY.

N. L. MITCHELL, Secretary.

"The enrollment for the year just closed is slightly below that of last year, while the attendance is somewhat increased. The enrollment, which appears at first sight to have fallen off, is really an improvement on the enrollment of last year, as by reference to the statistics given on another page will appear because for the year mentioned, ninety-nine schools were in operation and for the year just closed but ninty-five were open. If the four schools which were closed had been continued the figures would have been larger.

"We built during the year, four new houses, three for white and one for colored children. Three of these, (two white and one colored) were built in districts in need of better school facilities, and the other, to take the place of an old building.

"The majority of our school buildings will compare favorably with those of any other county in the State. One house was destroyed by fire last winter, but the insurance on it greatly aided us in erecting a new building.

I think, I can say without fear of contradiction, that our schools continue to show marked improvement. The proficient pupils each year are promoted to higher grades, and now we have pupils in all the grades as laid down in the schedule given for our guidance.

The efficiency of the schools could in my opinion be materially enhanced, if the duties of the Examiner were entirely confined to them. He then could visit them more frequently, see and correct existing abuses, and in many ways aid and assist the teacher in his efforts. This can only be done by having the duties of the Examiner made separate and distinct from those of the Secretary and Treasurer. In a county like ours, it keeps one man busy with the office work, correspondence, etc., and when he leaves the office to attend to the duties of Examiner, the work at the office is neglected. I would be glad to see some change in this particular."—Annual report.

HOWARD COUNTY.

J. G. ROGERS, Secretary.

No reply to the circular has been received.

KENT COUNTY.

E. F PERKINS, Secretary.

For more than a decade I have visited the schools and closely observed the practical working of our present system, and I say unhesitatingly there is but little in the system that I desire to see changed.

Some one has said that "no law will execute itself." The practical success of every system depends upon those who execute it. The school officials, including the trustees and the teachers, have, almost without exception, tried to execute the law in its spirit, and at the end of this, the second decade, the progress made is felt and recognized by the most casual observer.

Under the old regime a school lot was generally selected because it could profitably be used for nothing else, and our county is the inheritor of many such sites to-day. With the more liberal views of the present, the most eligible locations are selected by an experienced Board after careful examination, free from local influence.

The old houses, designed by some carpenter without the slightest reference to the comfort, convenience and requirements of a school, are slowly giving way to more artistic and convenient buildings, better adapted to the modern school.

In the schools for white children, the old time furniture, with one exception, has disappeared, and the children are conveniently and comfortably seated. The number of school buildings has reached, in my opinion, the desired maximum; and the building of the next decade should be of a substantial character, consistent with the liberal and enlightened public educational views of our people.

General county purposes require larger and better buildings at the county-seat; and looking to the future, the School Board has secured a good site. Whatever else may be supplied, we cannot have a school without a teacher, and a real teacher aglow with enthusiasm, with comfortable shelter, a blackboard and crayon, will have a school. The Kent County teacher of to-day recognizes this standard as no ideal, and we are advancing along this line.

At no time during the last decade have the teachers failed to meet quarterly in their County Association, and the recognized benefits are such that I am persuaded the teachers would not voluntarily abandon this aid to their work.

The regular work of the Association seems to have the Annual Institute less necessary. teachers of this county may be classed under three general heads. Those who have been trained entirely in the Public Schools: those who are graduates of or have had some training in the Normal School: and those who have been educated in Colleges or Private Schools. classes are about equal. Leaving out those teachers of long experience, and confining the comparison to the first two or three years of those who teach; those educated at Colleges, Academies and Private Schools, are as a class, the least efficient. Those educated in the Public Schools, exclusively, come next. My observation leads me to the conclusion that the best immediate results are generally obtained from those, who after a full course in the Public Schools, complete a two or three years course at the Normal School. Three years should be the minimum, and the last spent in practical teaching in the Model School and the lower Normal classes, and in hearing lectures upon general pedagogy.

The scholarship of those admitted to the Normal School has not yet reached the standard contemplated by the true idea of Normal instruction, but has advanced in a decade.

The district libraries provided for in the law are a nullity in this county, and have not been encouraged by the County Board, and wisely, I think, on account of the general insecurity of school-buildings, the general lack of interest in the subject, and what seems to be a too diffuse division of an appropriation for books.

There should be a County Public School Library. First, to supply teachers with the best works on pedagogics, and secondly, the pupils, through the teachers, with such books as teachers would desire their pupils to read. The fund suggested by the law for district libraries, concentrated, would be of practical benefit to the county.

We have no High School, no nomine, in Kent county. The schools are all graded according to the State schedule for primary grades, and many have pupils above those grades. In several the course is equal to that recommended for High Schools by the State Board, giving instruction in latin, the higher mathematics and higher English branches.

We have no denominational school, and but one elementary private school.

Washington College, one of the oldest educational institutions of the State, just beyond the limits of Chestertown, is largely supported by State aid. Its influence, as the only college upon the Eastern Shore of our State, is not up to the desired measure. Having no strictly preparatory department, an effort has been made to induce the Visitors and Governor to establish a High School department, open to the male pupils of the public schools of the county above the primary grades, within proper limitations.

Special attention being called to local boards of trustees, I give this feature of our system my unqualified approval. With the limitations upon their selection of teachers, I can think of no other appointing power to whose hands the selection could be more fitly committed. Their general influence in the school district could not be dispensed with without injury to the system.

The general favor with which the present system is regarded by our citizens is best evidenced by the very liberal and cheerful support accorded from the county treasury.

Our schools for white pupils were kept open as usual all four terms this year. The schools for colored pupils were open, one in each election district, during the four terms, and the remainder during the Winter, Spring and Summer terms. Our work for the year has, in the aggregate, been progressive. Since our last report we have built two new school-houses and an addition to the Rock Hall building. One of the new buildings supplies a new school district. The Board has also secured a new school lot with a view in the future to providing more suitable buildings for the Chestertown school.

Our Teachers' Association held five regular meetings

during the year, and continues to have the earnest support of the teachers.

MONTGOMERY COUNTY.

REV. S. R. WHITE, Secretary.

In the Annual Report from this county for the year ending September 30th, 1875, ten years ago, the receipts are reported as \$40,642.47. Disbursements (including balance in collectors hands of \$7,898.09.) \$40,642.47.

Number of School Houses, frame 60, brick, log 11, stone 1, total 73. Number of teachers (difference for the year, 80. Terms Schools were open, three.

Pupils for the year, white 2,956, colored 1,088, total 4,044. Official visits of Examiner 44, School houses built or enlarged during the year 4, cost \$2,248.40.

The Annual Report for the year ended September 30th, 1885, which accompanies this statement, shows:

Disbursements	 39,063.39

Number of School houses frame 78, log 2, stone 1; total 81. Number of teachers employed, 94. Terms schools was open, four.

Pupils for the year; white 3.494, colored 1,750; total 5,244.

Official visits by Examiner 188, for the year. Four School houses built costing \$1,797.14

The Annual average cost of schools and expenses from 1869 to 1880, and reports \$41,731.

Number of schools 81, with an annual average of nine and a third months in the year.

The average annual cost of school expenses from January, 1880, to January, 1886, \$40.470.

Number of schools 93; with an annual average of nine months in the year.

The average annual cost of supervision, salary of Commissioners and Secretaries, Treasurers and Examiners, from January, 1869 to 1880, \$1,500.

The average annual cost of same from January, 1880 to January, 1886, \$1,296.

The number of new houses built and furnished from 1880 to 1886, 22. The number furnished 22; the number furnished in part 7. Enlarged 2. Repaired 22.

The school houses, with a very few exceptions, are, now, of first-class, in size, comfort and material, taking the place of old dissipated frame and log buildings of half a century or more.

The teachers of the county have made decided advances in every particular, and exhibit a disposition to continue their work with increased zeal, availing themselves generally, of educational literature and the Teachers' Association organized in 1881, which meets quarterly, and has proved to be a material benefit to the county, in bringing the teachers together to compare thoughts and methods, thus greatly benefitting their schools. The majority of the teachers in this county, were educated in the Public Schools, and make most efficient teachers; only two or three, who attended the Normal School, and less, who have been to College—some have been in our Academies.

There are only three Public School Libraries, which have been organized within the past year or two.

There are no High Schools. We have four Academies; two are aided by the State which grant tuition to about eighteen pupils, Brookville and Rockville.

The Academy at Darnestown, under the control of the Presbyterians, and Sandy Spring, the Friends, also the Female Seminary at Rockland, Mr. H. C. Hallowell, principal in a flourishing condition, and Miss Porter's, near Poolesville, a Female Seminary, largely patronized, and a mixed school in the town of Rockville, principal, Miss Simpson. All the schools are well attended and are doing good work.

The question of school trustees, is the selection of teachers, will do very well generally speaking, but not in the dismissing of teachers as is often exercised, under the provision of law as it now exists; only to a limited extent do they give attention to the schools by visiting, etc., but are generally on hand in getting rid of a teacher, whether the patrons desire it or not, this power should be limited to the first month of vacation, unless for cause, during the school year.

Judging from the population of the county, I would suppose that a very small per cent. of the pupils were out of school or enrolled, the average attendance is only about one-half of the enrollment. A number of families employ teachers, who teach instrumental music with other studies. Comparatively few of the teachers in the Public Schools teach vocal music, drawing or latin.

The effort has been made to teach, first, the elementary branches, and teach them well, and if any are neglected, the higher branches are omitted, as provisions has been made for these in the Academies aided by the State.

Five new houses were built, furnished and paid for. Our County Teachers' Association met quarterly during the past year, and most of the teachers regard it as a valuable aid to their school work, besides the majority of the teachers avail themselves of school literature; all together the schools are improving in attendance, interest and solidity.

PRINCE GEORGE COUNTY.

C. F. BILLOPP, Secretary.

Within the last twenty years every Public School now in the county, (69) has been built, while they are not yet what they should be, they are so much improved in com-

fort, convenience and appearance that we are forced to be satisfied. They are all furnished with good black-boards and good desks.

In the past a teacher was approinted, sometimes because he was good for nothing else, sometimes to give him an opportunity to study a profession, generally because he would work for little or nothing, but seldom because of fitness for the position.

Now a teacher is required to pass a thorough examination in the branches taught, to receive an appointment, and then prove an aptness to teach, to hold it. Then, they heard the pupils recite lessons. Now they teach, explain and demonstrate on the blackboard to every grade in the school.

This improvement in the character of the teachers is principally due to the influence of the Normal School; for while several of our best teachers have not attended that school, all who have had that advantage, are good teachers themselves and make good teachers of their pupils, and by explaining their plans and methods at the associations, benefit and improve their fellow teachers.

We think the time will soon come when a Normal School Diploma will be required of every teacher. Several of our unsuccessful teachers have had no training except in the Public Schools, but, they have generally had Normal School graduates for teachers.

College graduates do good work with the higher grades but they generally fail with the younger children.

We have twenty-five teachers at this time in the county who have attended the Normal School.

They are but six school libraries in the county, and no other public libraries that we know of, except those belonging to Sunday Schools.

. No High Schools in the county.

There are ten Private Schools with an aggregate attendance of one hundred and twenty-five pupils, mostly very young. There are twenty-one tutors and governesses residing in private families.

Upper Marlboro Academy receives a State donation of

\$800. It is doing a good work. The School Board is now paying the salary of an assistant teacher at this school, who holds a certificate from the county Examiner, though the Maryland Agricultural College is in our county, our board has no official connection with that institution.

When the District School trustees take an interest in their duties, their influence is always very beneficial. As to their special fitness for selecting teachers, they are apt to be influenced by friendship or prejudice, but while the Principal of the Normal School or the County School Board has the power to grant certificates, they can't go far wrong.

Have no available means of ascertaining the school population, but believe eighty per cent. attend school, the ratio of average attendance to enrollment is over fifty per cent., this ratio is kept low by the colored pupils, many of whom work nine months of the year.

Music, drawing, object-lessons and calisthenics are taught in nearly all of the white schools. Latin and the higher branches of mathematics are taught in ten of the District Schools of this county.

The professional teacher is becoming more popular every day.

QUEEN ANNE COUNTY.

J. W. THOMPSON, Secretary.

I have been connected with the system from the time of its commencement under Dr. Van Bokkelin to the present time. I can accomplish what I desire better by taking up your circular letter, addressed to the Examiners of the State, item by item, than in any other way:

1st. "School-houses, what they are, what they were,

what they should be." They are all comfortable; they are nearly all new; they are nearly large enough; they are all furnished with black-boards and modern furniture—some with maps and globes, (but not many) and all with ordinary school comforts. There can be no comparison of the school-house of the present day with the school-house of the past. Where they are now notable for comfort and convenience they were formerly remarkable for everything of an opposite quality. Many of them had no benches, except slabs on blocks of wood without backs, and a blackboard was a novelty. As to "what they should be," to express much in a few words, there is as much room for improvement in this aspect in the next twenty years as there has been in the past. Our school men were without experience and made some mistakes. Believing that the schools as to numbers would not advance, they built the houses too small. They have already realized their mistake and have had to enlarge the houses, and it is now manifest to school men and citizens that new houses must be built and old ones enlarged to meet the greater demand for room. We should have, to make our system a success, maps, globes and school apparatus generally. but there is no prospect of obtaining them unless the State will make some provision for paying the school the large amount of over \$700,000 due them for money paid into the state treasury from the School Tax and unjustly withheld by State Comptrollers of former years. I have said enough upon this subject if I intend to say anything upon others equally important.

2d. "Teachers as they were, and as they are." Here the field is as broad and as fruitful as the one just glanced at. I speak only of my own county,—as I profess to know only of my own, and of general rules only, to which there are always exceptions. Prior to 1865, there were in Queen Anne County, forty-six men and women who "kept school" and "heard lessons," but a very small number of them who were teachers; probably, it would be a very liberal estimate to say the number did

not exceed ten or fifteen per cent. of the whole. We have now a corps of sixty teachers whom I would not fear to compare with the teachers of any county in the State, and many of them have obtained their training entirely in the public schools of their own county, aided by such assistance as they have received from Teachers' Institutes and Associations to which they have had access. Our teachers used to hear lessons, and that was considered teaching; and even at this enlightened day I am sometimes approached by parents who complain that their children have no long lessons to commit to memory at home as they had when they were children, and who believe that their teacher is doing nothing because they cannot see at a glance the large amount of oral instruction which their children have received at school.

3d. Teachers' Associations and Institutes." There is a diversity of opinion among teachers upon these subjects. and the difference is very great. Some teachers appreciate them very highly, while others think them of little Those who like them are the ones who are benefitted by them and vice versa. As to my own opinion. until the establishment of our system, I knew nothing about them, but I appreciate them so highly that no obstacle that any effort on my part could overcome. should make me dispense with them, and I am free to say in this communication, as I have often said when present at those places, that I never attended the sessions of an Institute or Association without learning something I did not know before. We have had in our employ teachers of every kind of training—Normal School training, College graduates, and of no training except what they received in our Public Schools. We have had a smaller number of College graduates than of any other class, and I think they have been the least popular. have come from the Normal School have been the most popular, and there have been instances when teachers from the State Normal School, after serving a community long enough for their value to become known, and finding it to their interest to change their school, have been offered a hundred dollars a year in addition to their public salary to remain, and in one or two instances have accepted the offer, and in a number of others have refused. These are facts, and may show the grade of public opinion better than mere speculation. While I state this, I, at the same time, must state that there are many teachers, who owe their training entirely to their own efforts, who are doing as good work as any from any other class,. I have heard many of our best teachers of this class say that their association with teachers of different training from themselves has been of vast benefit to them in their profession.

We have no libraries; teachers have availed themselves of that provision in the School Law that gives to a school out of the public funds ten dollars, to aid in starting a school library, when the school will raise a like sum for the same purpose. This has been done in some instances, but it has never amounted to much.

We have no High Schools receiving State aid. have graded schools with principals and assistants, but no High Schools. Centreville Academy, receiving a donation of six hundred dolars a year and governed by a Board of twelve trustees and which makes a report annually to the Comptroller of the Treasury, is the only Public School not under the School Board, and it has a kind of connection with our system, but is not under our There is also a donation of two hundred dollars paid to a Board of Trustees of Church Hill Academy, which they use in aiding to support a Private School in their village, which has taken the place of what was the Academy twenty years ago. There are two schools in the town of Centreville—one a Denominational School governed by the Protestant Episcopal church, but in no way connected with our public system; the other a strictly Private School under the control of a lady, a graduate of the State Normal School and of much experience as a principal of one of our graded schools. doing good work, and nothing but confined quarters prevents her school from being double in size.

"SCHOOL TRUSTEES."

I hardly know what to say. They might be of considerable aid and use, but that they are, is questionable. A trustee except to sign a teacher's report, scarcely ever enters a school-room. There are to this assertion some honorable exceptions, but one trustee or visitor, as was the case at the commencement of our system, I think would do better work, and I cannot see that they have any peculiar fitness for selecting teachers. Teachers can only be selected from among those who possess certain special qualifications, ascertained by examinations made under the law, and I cannot see that because a man has been appointed a trustee, it gives him any better judgment in making these appointments than before his selection as trustee.

"ATTENDANCE OF PUPILS."

I do not know the average enrollment of scholars to the school population between the ages of six and sixteen years, but as far as I have been able to get the opinion of teachers, it is about fifty per cent., and the ratio of attendance to enrollment has been for many years about fifty per cent.

"SPECIAL STUDIES."

There is every little attention paid to special studies. In a few schools the teachers and pupils own organs and attend to music on the organ and singing. Map-drawing and object lessons are pursued to some extent and calisthenics slightly, it being the opinion of the teachers that the long walks the pupils take to and from school give them plenty of exercise. Many of the pupils are instructed in the higher branches of arithmetic, geometry, etc., but very little Latin. etc., is taught in our Public Schools. Here I might stop, as I believe I have noticed all the points embraced in your circular letter, but there is another thing that seems to me of importance enough to deserve a passing notice. What has been said refers entirely to studies, but if our Public School System has

exerted a good influence in any other way, is it not worthy of notice.

At the commencement of this paper I spoke of the low grade of our Public school houses—their furniture, etc., but the grade was no lower than the appearance of the children attending the school. Girls and boys, from eight to fifteen years of age, thought nothing of attending school barefooted, their clothes neither clean nor tidy. and their mothers at home never thought it out of place to permit it, but now what a change has come over the spirit of the scene. A mother will not permit her child, especially a girl, to go to school if she cannot make a respectable appearance, and though there has always been, and always will be, grades in communities. I defy any man, a stranger in any locality in Queen Anne County, when meeting groups of children on the public roads going to and from school to distinguish from their appearance the children of the poor laboring man from those of his more fortunate neighbor. They all look alike. It is quite a common thing at the close of our summer term to close the year with a day of enjoyment for the children, in which the older children, girls and boys, participate, and it is a day of enjoyment for the whole community. If anybody ever saw such a state of things prior to 1865, he was permitted to see more than I ever saw. There must be a cause for such a change, and what cause more likely to be the right one than the influence the Public Schools have exerted in every community. Then let the Public Schools go on until they shall not have a single enemy in the State. Never let them be contaminated by being exposed to the muddy pool of politics, but let them be kept pure and clean, and fit to do the sure work that is their special mission.

There are several neighborhoods in our county where the people are clamorous for school privileges, and not without reason, because they are very much needed, and where our Board can not supply them because they have barely enough to carry on those they have already to provide for. Our Boards of County Commissioners have always been as liberal as they could be expected to be, for as the want of schools increased, the ability to supply them does not increase. When the present school system commenced the prices of agricultural products were almost double what they are now. I do not see what can be done unless the Legislature of the State will pay the large amount of money the State owes the schools, and then let the white schools have the whole amount of tax paid by the white population and the colored schools be paid, as they are now, all the taxes paid by the colored people, and the balance of the appropriation paid to them be taken, as it was when the law making it was passed. out of the General Treasury. If this should be done, all parts of the State would be benefitted, and the schools, as they ought to be, be placed in such a condition as would be an honor to the State, without placing addditional burdens upon an already heavily taxed people. This would be no more than simple justice.

Many of our people do not know that the schools have a judgment against the State for nearly six hundred thousand dollars, a judgment rendered upon a suit brought by the Schools against the State in one of our Circuit courts. That old Latin quotation, which I have always admired, might be appropriately used here. "Fiat justitia, ruat cælum."

ST. MARY COUNTY.

F. N. HOLMES, Secretary.

Our school-houses, now in a fair condition, as compared with those of our county twenty years ago, may be considered excellent; our teachers beyond measure, exceed

the efficiency and effectiveness of those who drilled the "little learning" into the minds of our children at the beginning of the present system. We have in the employment of the Board, three Normalites whose effectiveness is only exceeded by their healthful educational influence in our county; nine College graduates, four of whom hold first grade certificates; seven first grade teachers; one from St. John's Academy, Alexandria, Va.,; three from Charlotte Hall, St. Mary County, Maryland; and three self-educated; the other teachers may be numbered among those who receive primary school educations and those who have attained their present position by their talent, industry and perseverance.

There are several private schools, of which I have little or no knowledge; one Denominational school, St. Mary's Academy, established at Leonardtown, Maryland, September, 1883, and two Academies, St. Mary's Seminary and Charlotte Hall, receiving State aid.

Of the former, little, from its recent establishment, can be said beyond the promise of usefulness and success: of St. Mary's Seminary and Charlotte Hall, I am not prepared to speak, never having attended a public examination at either Institution. The applicants for teachers' certificates, educated at the latter, have stood well in our examinations, and their influence and usefulness as teachers will, in my judgment compare favorably with those from other institutions. Our people are somewhat wedded to the idea that, having provided a system of pulic education, the State should withhold or withdraw all appropriations from private institutions; that better results could be obtained by the application of these funds toward the perfection of our Public School System, beause in aiding the people's schools the State would better develop natural talent and true merit, instead of. in many instances, fostering educated ignorance upon real merit and genius, and educating, at the expense of the State, children that in almost every instance, would otherwise receive collegiate educations; nevertheless, St. Mary's Seminary and Charlotte Hall and like institutions, have their friends, and those of this county can and have shown as high claim to State patronage, if popular judgment is to be respected, as those of every other part of Maryland.

As other facts in regard to these institutions are of as easy access to you as to me, I prefer to leave them to your riper and fuller judgment; premising that all answers to your letter of interrogations, not found herein, will be found in my Annual Report.

The Board has built three new houses for colored schools and rebuilt one white school, destroyed by fire.

A further test of the idea of awarding three premiums each to the white and colored Public School-going children of our county, for the best essays on subjects selected by the Examiner, encourages the belief in the wisdom of this experiment in the management of our schools. So far, the effort to create an interest and taste for English composition has been most successful.

SOMERSET COUNTY.

W. H. DASHIELL, Secretary.

1. Statistical and Historical.

	1875.	1885.
	(Census of 1870.)	(Census of 1880.)
Population of Somerset County, (white) (colored).		13,031 8,637
Total	18,190	21,668
Population between 5 and 20 years Enrollment in public schools, (white) " (colored)	2,494	2,925 1,613
Total	3,353	4,538
Average attendance, (white)(colored)	1,027	1,387
Total	1,264	2,103
Ratio of enrollment to population between 5 and 20 years		
Total		61
Number of schools, (white)(colored)	41	50
• Total	57	72
Number of teachers, (white—males) " " (white—females) " " (colored—males) " (colored—females)	18 32 9	21 45 9 14
Total	66	89

The above figures are very suggestive. The demand for public instruction has increased wonderfully during

the past ten years. Private Schools have been almost entirely routed from the county. There are at present only five such schools in the county, the limited attendance of which will be seen by the following list:—

Teacher.	Location.	No. Pupils.	Ages.
Miss Bettie Handy Miss Bessie Dorsey Rev. Wm. Merrill H. A. W. Kellam Miss Addie Messick	Fairmount	3 1	(Small children.) 14 7 to 12 (Small children.)

The total attendance at private schools is thus seen to be forty-seven. These are mainly small children and pursuing elementary studies. The two schools in Crisfield are the result of the overcrowding of the Crisfield Academy and its adjunct schools. It is the opinion that this overcrowding will soon be rectified and the public freed from a double school expense. In 1875, the number of private schools, I think, was much larger, though I am not able to give their number and the range of studies extended to the higher branches. It will be perceived that the public schools have won their way into the hearts of the people, and they have become the centres of higher as well as elementary instruction.

There are five High Schools in Somerset County:

Name of Principal.	Name of School	Location.
1. Jos S. Crockett	Fairmount High School	Marion Station. Fairmount.

All of the above are doing excellent work. Washington High School, or, as it was formerly known, Washington Academy, is the oldest institution in the county and one of the oldest in the State. It was founded nearly one hundred years ago. It has been the great fountain of learning for the county. The old brick building known as the "old Academy," is still standing and is still in the

hands of the Board of Trustees of that institution. This building was vacated and the school moved to Princess Anne, about fifty years ago. For a long time it was an institution for the instruction of boys only, who were here prepared for College. The girls were sent to private schools or had instructors at their homes, preparatory to their seeking a completion of their education at some city school or seminary. In 1872, Washington Academy became by agreement a part of the Public School System of the county and was opened to youth of both sexes. Its standard of study is high and course of instruction, thorough. It has four excellent teachers.

Fairmount High School is the result of the union of several districts. It has four able teachers.

Marion High School was established in 1873. Its influence, under the management of Mr. B. F. Haynes, who has been its only principal, has been extended and beneficial. It has three teachers.

Crisfield High School is the outgrowth of the union of several school districts. Its buildings are the best in the county. It has five teachers and an attendance of some three hundred pupils. The grades are well preserved and the standard of instruction is good. Since its establishment, in 1876, it has accomplished a good work for the growing community of Crisfield, but the population of the town, now with its suburbs amounting to some 3,000 people, has grown beyond the capacity of this institution, and there have been established two primary schools, limited to the first three grades, with an enrollment of one hundred pupils, in addition to two private schools with thirty-three pupils. Rock Creek High School was established in 1881. It has three excellent teachers.

Colored Schools.—The colored schools of the county have kept pace with the growing colored population. Fourteen schools have been organized in the last ten years. These have been suitably located and all are fairly attended.

II. SCHOOL-HOUSES.

Most of the school-houses have been built by the County School Board. The ground, including sufficient for playground, have been usually deeded to the Board by individuals generously inclined. Four school-houses are rented property; five are church property used free of expense; three are buildings erected for the double purpose of worship and education by private subscription. The school-houses, for the most part are comfortable: at least it has been the endeavor of our school officials to make them so. Many are not beautiful, but is our aim to build new ones with some reference to architectural beauty as well as comfort. I regret to say that only three of our school-houses have modern furniture. of the furniture is home-made and, although comparatively comfortable, is scarely in keeping with this progressive age. Nearly every school-house in the county has sufficient blackboards. A majority have wall maps and a few have writing and reading charts. Globes and other implements are scarce.

The school buildings are generally heated with wood stoves, but when convenient, coal is used. Ventilation is generally secured by opening doors or windows, a system. frequently productive of colds and ill-health—ventilation is one of the most important matters connected with the building of school-houses and none should ever be built without a careful study of that subject. One of the most fruitful causes of sickness in our country schoolhouses is bad flooring, allowing draughts of cold air upon the feet. In most cases the flooring should be double, and the under-pinning as complete as for dwellings. Another matter, formerly neglected to a great extent, is the erection of out-houses. This matter we are rapidly correcting and the matter is now attended to when the school-house is built. The health of too many persons is at stake to question the expense. The lack of suitable and convenient buildings is owing mainly to the following causes:

- 1. Too rapid growth of School Districts and scarcity of funds for building purposes.
- 2. Too hasty adoption of plans and specifications and awarding of work to unskilled persons.

Our school-houses should be made attractive, inside and out. An attractive room with a live teacher in possession of suitable helps will soon put new life into a School District, and a reaction will take place as to tax rates and conservatism.

III. SCHOOL TRUSTEES.

I concur in the opinion expressed in the Report of the State Board of Education, "There should be but one trustee instead of three." One good man who knows his duty and feels his responsibility, will accomplish something; three seldom do. The instances of School Trustees visiting their schools at regular intervals are few and far between. As to the special fitness of trustees to select teachers, my experience as School Superintendent is too limited for me to give a decided opinion. I can see, however, from my brief observation some serious objections to the present system. There are, of course, here as elsewhere, live, wide-awake men, who, as School Trustees are doing valuable work, but these cases are exceptional:

IV. TEACHERS.

The following table is an important one for reference:

•		•	White	Colored.
Number o	fteachers	in county	66	23
46	"	who are College graduates	6	
46	66	" Normal school graduates	1	
66	44	who are College graduates	5	
. "	46	who have been trained in District schools	•	
		and Academies	54	23

The fact that some of those who have been educated in our District Schools and Academies are occupying the position of principal of graded schools and other high

position in our schools, and others doing good work in the sole management of large rural schools, is a strong plea for our Public School system. As a rule, however, those who have had special Normal training, show the most adaptation to the work, particularly in Primary Schools, and their methods are producing the best results. bright person can learn much by actual work in the school room, but too much time is lost and too many suffer by this method of gaining experience. The cases where teachers take hold from the begining as if by intuition. are exceptional. We need more trained teachers and unless they can be secured, otherwise, much work will devolve upon the County Examiner. We are endeavoring. as far as possible, to compensate for the lack of this Normal training, by regular examinations, with a high grade of questions and marks, and by systematic and frequent visits to the schools.

We have had great trouble in procuring colored teachers, and have been compelled to send to a distance for many of them. It seems to me, we ought to call upon our Colored. Normal School in Baltimore, for help in this matter. I don't remember to have ever seen a teacher from that institution. The salaries we pay our colored teachers are as good as elsewhere. We have adopted the method of requiring annual examinations from those who fall below a certain standard, and by this means, we are to a certain extent, succeeding in getting a better class of teachers for our colored schools.

It is too apparent, that teaching is not looked upon as a profession, as it ought to be, and it is not surprising when it is expected that teachers can live upon air, or the pleasing hope of a reward in the world to come. What we need to procure, good teachers and keep them, is a generous treasury. The average salary per month of our teachers, is only \$30, scarcely more than it was twenty years ago, and yet the condition of our finances will not admit of a larger one. This evil ought to be corrected, and good teachers ought to command anywhere, a good salary and receive it.

In short, we need bright, attractive school-houses, wide-awake trained teachers, a full purse to pay salaries and other school expenses, including suitable necessary helps for the teacher. Bright schools make bright scholars, and the habits of neatness, study and care soon find their way into the homes. Attractive schools and teachers will do more than anything else to cure irregular attendance, that bane to school progress, and to produce a healthy feeling among the people for the liberal support and perpetuation of their Public Schools.

V. STUDIES.

The course of studies in our schools, outside of our High Schools, is confined mainly, to the first six grades. The tendency of the present is to the practical, and it is the notion that some studies are not practical, that is depleting our High Schools, and thining the ranks of those pursuing the higher branches. The following table will show this:—

			1	875.	1885.
Number of	pupils	studying	Latin	70	26
"			Greek		0
48	44	46	Geometry	10	41

The following table, showing the attendance in the High School departments of the various High Schools, and also the total attendance in these schools, will be of service:

			1875.			1885.		
			Total	Att.	H. S. Dept.	Total	Att.	H. S. Dept.
Washington Fairmount Marion Crisfield Rock Creek	High " "	School " "	18 4 11	2	50 42 32	17 16 10 34	88 18	59 30 29 38 18
Total	• • • • • •		27	79	124	88	05	174

It will be observed that classical training is on the wane. I am strongly of the opinion, that unless decided steps are taken, to insist upon a regular course of classic instruction, and to allow no deviations from the rule, our High Schools will lose much of their vivacity and usefulness. It is time that other important studies are pursued to advantage, such as, Philosophy, Physiology, Physical Geography, History, Geometry, Trigonometry, etc., still the training and mental drill from the pursuit of classic study, can not be over estimated. I have no desire to encroach upon collegiate studies, but our High Schools should be so in reality as well as in name. Drawing, calisthenics and vocal music, are not pursued to any extent in our schools.

VI. SCHOOLS RECEIVING STATE DONATIONS.

VII. GENERAL OBSERVATIONS.

- 1. School Revenue.—The tax rate has varied in our county from ten to fourteen cents on the \$100, and is now twelve. This is not sufficient. Our schools with the revenue derived from all sources, can be kept open only eight months of the year. Our colored schools can be kept open only seven and a half months. The revenues are too fluctuating and uncertain. They should be certain and permanent; the School Board should know exactly the amounts it is to receive from year to year and thus be able to determine definitely what expenses can be incurred.
- 2. Text-Books.—There should be "free books for free schools," for several reasons: (1.)—Many schools are in bad shape from inability or failure of parents to procure text-books for their children. The grades cannot be properly kept up, and the progress of the classes is retarded. (2.)—If changes are necessary, one set of books can be withdrawn and another substituted without burdening the parents with the extra expense. Ill feelings and complaints can thus be avoided.

In conclusion, I think the schools of Somerset will compare favorably with those of our sister counties, and

whilst they are doing a great and good work, I have thought it wise to make the above comments with a view to reforms necessary to add to their usefulness.

TALBOT COUNTY.

A. CHAPLAIN, Secretary.

The present report marks the termination of the second decade of the public school history, under a State System, with which you have been connected from the time of its inauguration; and we congratulate you upon the substantial proofs which these years furnish, that this history has been one of progress and success. Although the system has not accomplished everything that could be desired, yet it has accomplished more than even many of its most sanguine friends expected. To still further develop its efficiency, and to make it worthy of the support and encouragement of a united and approving public opinion, it requires to be directed in the future, as it has been in the past, by a wise and prudent administration. The great underlying principle of a Public School System, is the elevation of the whole people, and its work is necessarily slow. In addition to the improvement of the schools which we found, new school districts had to be formed and supplied with houses. The whole system of Public Schools for colored children has been organized, and whatever was found immediately necessary for their equipment and growth has been provided.

When the State System went into operation, the schoolhouses in this county, with two or three exceptions, were unsightly, uncomfortable, without blackboards and suitable furniture, poorly heated, and indifferently adapted to school work; but now nearly all of our school-houses are new, or have been enlarged and repaired, and are supplied with good blackboards and modern furniture. The elevation of the schools of the rural districts is still, however, a field that invites our best thought and activity. We need better school-houses and better teaching to place us in line of march with city schools. The influence of our State Normal School, school literature and association of teachers, has done much to improve our methods; but still our teaching, for the most part, is a dull, mechanical process, which still needs more of the awakening power of true life and artistic development.

The efficiency of the teacher is largely increased by suitable surroundings and proper school apparatus. For the improvement of our Public Schools, then the first epoch in their history, under the State System, was that of building more suitable houses. We are still in the midst of this epoch; and the public begins to realize that our school-buildings and grounds are, in large measure, the criterion by which communities are judged, and that they should represent the wealth, development, and intelligence of our people.

The study and experience of many years satisfies me that school-buildings in the rural districts should be sufficiently commodious to give teachers and pupils pure air and ample working room; and, for this purpose, the house should be twenty-four feet wide and forty feet long, from out to out, with the ceiling twelve feet high. feet be cut off, for the purpose of making three rooms, you can have separate entrances and cloak-rooms for the boys and the girls, and a private room for the teacher to use as a library and apparatus room. Libraries and the necessary apparatus for good schools will, most probably, not be accumulated, unless the teachers find some place provided for the preservation of these important school appliances. The fuel-room should be built in connection with the house, at the rear, with an inside communicating door. Convenience, comfort, and economy make the fuel-room a matter of great importance. The chimney

should be built from the ground, with two flues—a smoke flue and a foul-air flue. By means of a cold-air box, fresh air should be introduced from the outside and passed through the heater, which will insure pure heated air, distributed equally in all parts of the room, when connection is properly established through the use of the foul-air flue. In this connection, I have studied, as you will perceive, the following requirements of a schoolroom: an equal distribution of heat, a constant supply of fresh air, and economy of fuel. From experiments actually made and continued through several years, with results carefully noted by myself and by our teachers, I am convinced that almost perfect heating and ventilation. for such a school-building as I have indicated, may be secured at a cost additional of about one hundred dollars only,—a paltry sum, indeed, to be weighed against the health and comfort of our children in school.

In intimate connection with the subject of school-The average county houses stands that of school-lots. school-lot contains less than one-half acre. entirely too limited a quantity of ground to meet the needs of a healthy and progressive Public School System. In the near future, the rural districts will be equipped with school-houses properly planned and furnished, we hope; and the law of growth and an enlightened public sentiment will compel us to enter upon the work of beautifying and ornamenting our school-grounds with shade trees, shrubbery, evergreen hedges, and flowers. After the landscape is brought into harmony with a neat and tastefully-built school-house, much open space will still be required for play-grounds. The school-lot minimum should be, then, two acres; but four acres, in my opinion, is not too much ground to dedicate to this The land-owners around our villages are usually anxious to extend the limits of these settlements, in every direction, and some of them actually lay off avenues and building lots. As an inducement to purchasers, lots are frequently donated for churches and public squares; and if school-officers would use proper foresight

and be upon the alert, commodious school-grounds could often be secured, without cost, in advance of the necessity for a school-building. In selecting grounds for school purposes, it should be borne in mind always, that the soil should be light and sandy, the elevation sufficient for perfect drainage, and the landscape agreeable to our sense of the beautiful.

It gives me pleasure to report that the Teachers' Association of this county has established a library, which contains now more than forty titles of standard pedagogic works. This, of course, is a small beginning for the number of teachers having access to the library, and a number of duplicates of the best books upon methods and school management have already been purchased. The demand for Miss Patridge's "Quincy Methods" is so constant that four duplicates have been procured to meet Most of these books are not to be read merely, but to be studied with a feeling of diligent and earnest inquiry after truth and a new and better way; and it is a hopeful sign of a desire to attain to the highest excellence in their work when teachers become deeply interested in the literature of their profession. Some of our schools, too, have small libraries. The books have been judiciously selected, I think, and are such as children can profitably read. In general, the only enthusiastic teachers in using and managing school-district libraries are those who have been trained in our State Normal School, and their zeal and energy in the matter cannot be commended too highly. In the hands of average teachers who perform their duties in a perfunctory manner, school-district libraries are neglected and fall into comparative disuse. the selection of books for school-district libraries, I still hold the opinion expressed to you on a former occasion, that the school law should be so amended as to take this power from the "Board of District School Trustees," and give it to the teacher and the examiner. For more than five years I have given this subject special thought and attention, and think that I know what books should be placed in our school libraries, and how they should be

used. Our children will read, and we know that they are tempted on every side by literature that is cheap, but vicious and unfit for young people. Yet only those who have an extensive acquaintance with books, and who understand children and know their thoughts and their feelings, are prepared to help on the reform of children's reading, and to select the books which can lift them to a taste and a plane above the attractions of harmful literature.

There are four public high schools in our county that have been in successful operation for many years. In these schools both boys and girls are received as they pass from the required grade, and they pursue together the same curriculum, embracing French or German, Latin and Greek, and through Plane Trigonometry in mathematics. The Easton Academy trustees leased their buildings and grounds to the School Board, for a nominal consideration, about twenty years ago, for the purposes of a high school, and no school or academy in this county has received aid from the State since this transfer of the Easton Academy property, and the establishment of a public high school instead. For education in the higher branches there is no provision outside of our public high schools.

Less than fifty children attend private schools that give instruction in the lower grades only. These schools have their uses, and one or two of them do excellent work in preparing pupils to enter the higher grades in our public schools. We gladly welcome all private enterprise that endeavors to give us schools taught by teachers of culture and experience.

WASHINGTON COUNTY.

P. A. WITMER, Secretary.

As the class of the present school year marks the end of the second decade of the existence of the system of Free Public Schools, established for the State of Maryland, by the General Assembly, in 1865, it is proposed, in compliance with your request, to submit, briefly, in this report a review of educational work in Washington County, during the period which has elapsed since the organization of the system, and a statement of the present condition of education.

To organize, from the chaotic educational elements found here at the close of the year 1864, a system of Free Public Schools, which should bring order out of chaos, system out of confusion, and success in the face of influential opposing forces was a work impossible of accomplishment in a very brief period, even under the most favorable conditions, and though directed by the highest professional skill and ability. Some of the difficulties at the start were an insufficient number of school houses. want of properly trained teachers, inadequate financial support, and a public sentiment which either openly opposed the innovation or was undecided as to the economy, the utility and practicability of the system. At the close of the school year 1865, there were reported for this county 114 schools with 114 teachers, and total enrollment of 4,755 pupils, with 400 pupils in private schools, academies, etc. These schools occupied 114 school houses, only a small proportion of which were owned by the county, and many of them entirely unfit for school purposes. In 1885, there were 130 schools,

taught by 191 teachers, and having an enrollment of 8,441 pupils, besides the 425 pupils enrolled in private schools.

The following table presents a comparison of several items of school statistics more satisfactorily:

	1865	1885	Ratio to Population 1865	Ratio to Population 1885	Increase Per cent.
Population	31,417 114 114 5,155 3,093 \$ 6,25	38.561 130 191 8,866 5,216	1 in 276 1 in 276 161 per ct. 10 "	1 in 297 1 in 201 23 per ct. 14 "	22 14 72 70 .05
Cost per Pupil	31,000	\$ 6.5 155,000 94			500

The population of Washington County, in 1880, between the ages of five and seventeen, corresponding nearly with the school age in this State, was 11,916. We have therefore about seventy-five per cent. of the whole schoolgoing population upon the registers of our schools.

SCHOOL HOUSES.

The progress which has marked educational matters in this county is strikingly indicated in the improvement in the character of the school buildings. There are now 130 houses occupied, of which 109 belong to the county, twenty-one being owned by private individuals and corporations. Of the 109 houses owned by the county, ninetyfour have been built since 1865, and, of this number, 11 have a seating capacity of 200 and upward, and nine will accommodate between 100 and 200. Whilst our houses are not probably of the most approved design, and exhibit no special architectural beauty, they are, nevertheless, substantial and comfortable, a decided improvement upon the log hut of the olden time. As the years go on and public sentiment learns to appreciate more and more the influence of pleasant surroundings as an educator. we may expect that more attention will be given to the plans of houses and the decoration of the grounds. the last two years, fourteen new houses have been erected.

and, if proper financial support is offered, it will require only a brief period to supply all the buildings which the present necessities of the schools require.

TEACHERS.

When our system was introduced in 1865, it found in the county a number of volunteers in the profession, many of whom were not qualified for the important and responsible duties of the position.

Without special training, without professional knowledge, with nothing, indeed, but the personal favor of neighbors and friends, many of them had entered upon the work, and when, under the requirements of the new system, they were summoned to an examination, they failed to stand the test. Necessarily many permits were granted, it never occurring to those who held these professional indulgences that they carried with them an implied declaration of unfitness. Gradually these permits grew into disfavor, and many years ago, were entirely abandoned. Every agency that was deemed available was adopted to raise the professional standing of our teachers, and soon a marked change for the better was observable in the character and spirit of the body. ers' Institutes and Associations, an elevation of the standard of competency, close inquiry into the work of teachers, and the better and higher character of our schools, all have been instrumental in elevating the personal character and professional standing of our teachers. Of the 191 teachers employed in the schools of this county. 136 are males and 55 females. Twelve were educated at College, thirty in High Schools or Academies beyond the limits of Maryland, nineteen in Normal Schools, 122 in the public schools of Washington county, and eight in other public schools. The average salary paid to teachers is \$84 per term, or \$252 per year of three terms.

Of the comparative value of the training for the profession of teaching received at in the College, Academy, Normal School, Public, High or Graded School, or common District School; it is, in our opinion, difficult to speak with

absolute certainty. So much of success in the school room depends upon qualities which must inhere in the true teachers, that all training, in many cases, fails to produce thoroughly successful results. As already intimated, the great majority of our teachers have received their only training in the Public Schools of the county. Many of them are efficient teachers, and do good work in the school room, but, quite a number I regret to say are not successful, and a fair proportion of these latter, never will succeed.

I am inclined to the opinions that, as a rule, those who have received proper Normal training, make the best teachers. Speaking of the whole body of our teachers, it may be said, with truth, that they are earnest, conscientious, anxious to improve, and are doing a work which in the value of its results is immeasurably above the compensation received.

HIGH SCHOOL.

We have nominally only one High School, known as the Washington County High School, and located at Hagers-The grammar departments of all our graded schools, however, with two exceptions, are doing High School work, the curriculum in all of them, embracing such a course of study as will prepare pupils for admission into any College. All graduates of these schools do not enter Colege, and the Public School course completes the school career of many of them; but these latter go out into the world quite well equipped for the work of life. It is this body of intelligent boys and girls, which year after year pass the portals of our higher schools which makes up the mass of intelligence in this county. It is to them, principally, we are indebted for the social order, the mechanical, mercantile and industrial prosperity, which places our county, in these respects, among the foremost in the state, and those who would strike out of the Public School curriculum, everything except rudimentary instruction in reading, writing and arithmetic, should hesitate before taking a step which would undoubtedly

result in the most disastrous consequences to the social and material well-being of the people. It is proper to add, that our people, fully appreciating the advantages which our higher schools are placing before the youth of the county, are giving their cordial support, and would not, in our opinion, long tolerate any administration of our system which should venture to strike out this popular feature.

PRIVATE AND DENOMINATIONAL SCHOOLS.

The private and denominational schools of the county, though not numerous, are doing good work in their respective spheres.

At the head of these classes of schools, stands in number of pupils, character and influence, the Hagerstown Female Seminary, under the management of Dr. C. L. Keedy, the Seminary has a corps of eight or ten teachers, and numbers over one hundred pupils. The course of instruction is regarded as thorough, and the teachers competent. All the surroundings are of a character to stimulate an excellent, social, moral and intellectual growth, and we believe, the indefatigable efforts of Dr. Keedy to give his school front rank among institutions of a similar character, are meeting with deserved and gratifying success.

St. James College Grammar School, located a few miles south of Hagerstown, and conducted by Mr. Henry Onderdonk, ranks high as an institution for secondary instruction. It numbers fifty or more pupils and prepares young men for College or business pursuits.

St. Joseph's Academy, for boys and girls, a parochial school attached to St. Mary's Catholic Church, of Hagerstown, is conducted by three school sisters of Notre Dame, Maryland, and numbers one hundred and twenty five pupils.

The school is conducted upon the principle that the secular and religious education of children should go hand-in-hand and, with this object in view, the pupils receive instruction in the various branches of a practical

secular education and are, at the same time, taught the elements of Christian doctrine.

Other private schools throughout the county are the schools of the Misses Mitchell, numbering twenty-five pupils of all grades from beginners to those who are prepared for the graduating class in any young ladies' Seminary; the school of Mr. D. Melvin Long having twenty-five pupils ranging from the fourth grade to classes in course of preparation for College; the primary school of Mr. S. C. Spielman with about forty pupils and the primary school of Miss Martha Stuart numbering about forty pupils, all in Hagerstown; the Baldwin Home, at Clearspring, with twelve pupils under Mr. H. A. Bachtel and the two primary schools of Mrs. Lyons and Mrs. Helburn, in Williamsport, numbering together about twenty-five pupils; making an aggregate of pupils, in private and denominational schools, of about 442.

HIGHER BRANCHES.

As before intimated the so-called higher branches, Geometry, Trigonometry, Latin, Greek, German etc., are taught in the public High School and in the highest department of the graded schools, with two exceptions. By reference to our statistics it will be seen that pupils are studying these branches as follows: Geometry, two-hundred and seventy-four; Trigonometry, forty; Surveying, twelve; Latin, eighty-two; German, sixty-six; Greek, fifteen and French eleven.

Music is not taught as a specialty, though in many schools of the county, there are regular exercises in vocal music.

Drawing has never been introduced into the schools of this county, notwithstanding the Examiner has frequently recommended its introduction. Object lessons, though given in a few schools, may be said to be almost entirely neglected, and calisthenics, except for purposes of occasional exhibition, are unknown. With regard to the latter, it may be said, however, that the youth of this county, as a class, are trained from early childhood to

habits of active industry. Our people are essentially a working people and both boys and girls, in country and town, are constantly taught the necessity, the propriety, the healthfulness and the respectability of manual labor. The idea, so prevalent in many circles, that physical labor is not respectable in man, or genteel in woman, has not found lodgment in the minds of our people, and the teachings at home and school are directed to the development of active habits. With our children growing up into these habits, it is regarded as a matter of secondary importance whether they indulge in calisthenics or not.

Probably we should aim to cultivate more sedulously, grace of movement, symmetry of form and dignity of action, but public sentiment in this county looks to the development of a robust rather than a graceful physique.

Upon the whole we may conclude, that, during the twenty years ended with the year of 1885, the Public School system has brought about better schools, better teachers as a class, better school houses, superior methods of instruction, a relatively larger attendance and enrollment, a more general and a more favorable public sentiment and, consequently, more liberal financial support, and we may reasonably anticipate that the next decade will develop, in a still higher degree, all the agencies and instrumentalities which have been found helpful in the past.

No reply to the circular has been received.

COLLEGES.

The impulse which has sustained and carried forward the public schools during the last ten years has not extended to the Colleges. In 1875, there were 363 students in attendance at the four Colleges, St. John's, Washington, the Agricultural and the Western Maryland; in 1885, only 255. The cause of the decline may easily be conjectured. In 1875, these Colleges received from the State, \$35,590; in 1885, \$19,495.

It would be a great mistake to imagine that the universal diffusion of the first rudiments of school learning will compensate for the lack of a sufficient number of men of liberal education. If the primary school is the foundation, the grammer school the first story, the High School the second story, there is still needed the roof to crown and complete the edifice. In times gone by, men tried to build (educationally) from the roof downward, and failed. We shall fail signally also if we leave the house without the binding and sheltering roof.

What part the State should take in the fostering of secondary education depends on circumstances. It is plain that in Maryland, private beneficence has made the establishment of a State University unnecessary. the connecting link between the district school and the University is not likely to be supplied without State aid.

ST. JOHN'S COLLEGE.

St. John's College, Annapolis, had eighty-five students registered during the session 1884-5 of whom thirty-nine were in the Preparatory Department; sixteen in the Freshman class; ten in the Sophomore; nine in the Junior and nine in the Senior, besides two post-graduates. Of these, twenty-six receive boarding and tuition free, in consideration of an appropriation of \$5,200 a year by the Legislature for that purpose; and sixteen others receive free tuition.

In the Latin classes are fifty-one students; Greek, twenty-one; French, nineteen; German, thirty; English Language and Literature, twenty-two; Arithmetic, thirty; Algebra, twenty-eight; Geometry, sixteen; Trigonometry, ten; Conic Sections, eleven; Calculus, eight; Mechanics, four; Astronomy, six; Natural Philosophy, ten; Chemistry, fifteen; History, thirty-two; Mechanical Drawing, sixteen; International and Constitutional Law, eight; Military Science and Tactics, eight.

A few years ago, this College received \$25,000 a year from the State Treasury. At present it receives \$8,200, of which only \$3,000 is applicable to the support of the College proper, the remainder being barely sufficient to pay for the free boarders. It is plain that no institution can flourish under such vicissitudes. Without State aid it might adapt itself to adverse circumstances. moderate assistance given regularly and uniformly, it might prosper, but with winds blowing hot at one time and cold at another and no power to foresee whether the next blast shall be hot or cold, growth is impossible. For the sake of the memories connected with this the oldest of our Educational Institutions, it is to be hoped that the General Assembly will make such an appropriation for its support as will bring it into line as one of the factors of the Public School System and make it a connecting link between the High schools and the University.

WASHINGTON COLLEGE.

The Visitors and Governors of Washington College report that "during the last scholastic year there were twenty-nine students in attendance; four of whom were graduated with entire satisfaction to the Faculty."

The nine county scholars provided for by the Acts of 1856, chapter 219, and the six provided for by the Act of 1874, chapter 282, were all filled by creditable students who received tuition, board, books and stationery free of charge; and five indigent scholars in addition have received tuition free of charge.

The county scholarships are again all filled and the character and tone of the students are steadily improving under the influence of the three professors who constitute the Faculty.

The management of the institution is in all respects satisfactory to the Visitors, and the public usefulness of of the College is believed to be generally appreciated.

THE AGRICULTURAL COLLEGE.

Although the State is owner of one-half interest in the valuable property, the State has contributed nothing to its support for several years, The breaking out of sickness (scarlet fever) during the session of 1883-4 reduced the number of students to a very low ebb; but an effort has been made by the president, Augustine J. Smith, to revive the College, which has been attended with some success, and at the present writing there are about forty-five students on the register. The attitude of the State to this College is not logically defensible. If the College deserves support, it should be supported. If it does not deserve support, the income from the Congressional Land Grant (nearly \$7,000) should be devoted to some worthier object.

It has been remarked more than once in these reports that so long as the governing power of the College is divided between the representatives of the private stockholders and the representatives of the State, no uniform policy, and no permanent success need be expected.

WESTERN MARYLAND COLLEGE.

The Western Maryland College is the only one of the incorporated Colleges receiving State aid which receives young women as well as men. Last year it gave instructions to seventy-four men and fifty-two women. students received free tuition, and twenty-six others had boarding, books, and tuition without charge. For this latter purpose the State pays \$5,200 annually. The College also receives \$1,090 a year as part of the Academic donation of the county. The buildings and grounds are valued at \$35,000, and there is a library of 5,000 volumes accessible to the students. The preparatory class last year numbered forty-two students; freshman, 38; sophomore, 8; junior, 21; senior, 17. There were 98 students studying Latin; Greek, 40; French, 21; English Literature, 46; Anglo-Saxon, 17; Rhetoric, 46; mental and moral Philosophy, 38; Arithmetic, 42; Algebra, 58; Geometry, 36; Trigonometry, 36; Calculus, 8; Natural Philosophy, 40; Chemistry, 38: Mineralogy, 40; Botany, 12; Geology, 17; Physiology, 59. The Faculty consists of the president, the Rev. J. T. Ward, D. D., and eleven professors or instructors, of whom three are ladies.

JOHNS HOPKINS UNIVERSITY.

From the Tenth Annual Report of the Johns Hopkins University for 1885, it appears that the academic staff included during the year fifty-two teachers, five of whom were non-resident lecturers. The number of students enrolled during the year was two hundred and ninety, of whom one hundred and thirty were residents of Maryland. and one hundred and forty-five came here from thirty-two other States of the Union, and fifteen from foreign countries. Among the students were one hundred and seventy-four already graduated, coming from ninety-five colleges and universities; there was sixty-nine matriculates (or candidates for the degree of Bachelor of Arts); and there were forty-seven admitted as special students, to pursue courses of study for which they seemed fitted. without reference to possible graduation. The attendance upon the public lectures (not including those in French) averaged two hundred and twelve.

Nine young men were admitted to the degree of Bachelor of Arts, and thirteen were promoted to that of Doctor of Philosophy; making in all twenty-two graduates. Since degrees were first conferred, in 1878, eighty-eight persons have attained the Baccalaureate degree, and sixty-seven have been promoted to the degree of Doctor of Philosophy. During nine years, eight hundred individuals have been enrolled as students, of whom three hundred and eighty-six have come from Maryland, (including three hundred and eight from Baltimore) and four hundred and fourteen from forty-seven other states and countries. Of this number four hundred and seventy-four persons pursued courses as graduate students, and three hundred and twenty-six as collegiate students.

NEW BUILDINGS.

Near the close of last year's session, plans were drawn for the construction of a Physical Laboratory on the site at the corner of Monument and Garden streets. The building will go rapidly forward and the contract provides for its completion on September 1, 1886. This will furnish much needed relief to an important part of the university.

THE GROUP SYSTEM OF UNDERGRADUATE STUDIES.

A plan has been perfected for the arrangement of under-graduate studies in parallel "Groups," each of which leads to the Bachelor's degree. Much thought has been given during the year to an application of the "Group" idea to those advanced courses which lead to the degree of Doctor of Philosophy; and a trial scheme has been prepared by the Board of University Studies, suggesting as judicious certain combinations of subjects in which instruction is here provided.

In a good system of collegiate education, there are always two forces at work, freedom and authority, both of which are important for the attainment of the highest results in mental development. Without spontaneous exertions on the part of the scholar, who is not guided by a qualified teacher, is in danger of being slow, blundering and rambling. The problem which always perplexes college faculties, and also individual parents. teachers and pupils, is the adjustment of these two forces so that the resultant motion shall be in the right direction, with the least possible loss of energy. The problem has grown more and more difficult during the last quarter of a century. Science has made its great advances; modern languages have asserted their importance; the domain of classical instruction has been widened; history and political science have been recognized as of great educational value. Moreover, the pecuniary resources of American colleges have been enlarged, and the number of teachers, each desirous of enforcing the value of his own pursuits, has been greatly increased. It is not surprising, therefore, that the old "curriculum," as it is termed, has been essentially modified in most of the larger colleges of this country, and that "electives" are more and more allowed. These new and perplexing conditions have been recognized in this University since its foundation, and the experience of several years has confirmed the plans originally adopted. In place of a curriculum, and, instead of no curriculum, several parallel curricula have been arranged, which are assumed to be equally honorable, liberal and difficult, and which therefore lead to the same degree of Bachelor of Arts. They all include the study of (a) language and literature; (b) mathematics and other exact sciences: (c) historical and moral science, but the proportion of different studies vary. Seven schedules are announced upon the register, one of which must be chosen by every under-graduate who wishes to proceed to the Bachelor's degree. Certain studies are common to all these courses. that is to say, must be taken up by every under-graduate. Besides giving evidence of a good English education, the student, before his matriculation, must pass an examination in Latin and Mathematics, and also in Greek,

unless he distinctly gives up the classical course, in which case he may offer German and French as a substitute. Whatever course he afterwards follows must include physical geography, history and the critical study of English; logic, ethics, and psychology; the continued study of modern languages; at least a year in some scientific course connected with laboratory work; together with physical and vocal culture; and drawing. In addition to these studies he must devote his attention daily for two years to two comprehensive courses (such as Greek and Latin; or chemistry and physics; or Latin and mathematics; or modern languages, etc.), which will develop the tendency of his intellectual life.

The seven groups, for which, in accordance with these principles, arrangements are now made, are these:

- 1. Classical, corresponding closely with what has been hitherto known in this country as the usual college course;
- 2. Mathematical—Physical, which meets the wants of those who are expecting to enter upon the modern vocations in which rigid mathematical discipline is indispensable;
 - 3. Chemical—Biological, which is adapted to those, among others, who expect to enter upon the subsequent study of medicine;
 - 4. Physical—Chemical, which is most likely to be followed by students preparing for those scientific pursuits which are neither chiefly mathematical nor chiefly biological;
 - 5. Latin—Mathematical, which affords a good fundamental training, without prolonged attention to the study of Greek;
 - 6. Historical—Political, which furnishes a basis for the subsequent study of law;
 - 7. Modern Language, where French, German, English, and in exceptional cases, other modern languages, take the place of Latin and Greek in the traditional classical course.

STATE NORMAL SCHOOL.

The enrollment for the year was the largest since the organization of the school, 267 young women, and 17 young men. The average enrollment was about 250. The following figures indicate the atttendance every year since it was opened:

1866, 48:	1871, 163;	1876, 206;	1881, 264;
1867, 129;	1872, 162;	1877, 220;	1882, 256;
1868, 137;	1873, 146;	1878, 217;	1883, 253;
1869, 144;	1874, 174;	1879, 228;	1884, 267.
1870, 170;	1875, 207;	1880, 251;	•

Since the present appropriation (\$10,500) was granted in 1874, ninety-three students have been added, and the appropriation is no longer sufficient. Twelve thousand dollars are needed to pay the annual current expenses. The building needs considerable repairs; it should be painted outside and inside; the plastering in many places is cracked, through the shrinking of the wood-work; the steam-heating apparatus which has lasted for ten winters without repairs, needs a complete over-hauling. If the house were put in good order, it could be kept so for ten years longer with the small additional appropriation which is asked for.

THE COLORED NORMAL SCHOOL.

The Baltimore Normal School for the education of colored teachers is doing good service, and commands the approbation of its patrons. The number of pupils during the year was one hundred and eighty-six, of whom a majority were in the preparatory department. Among the seniors are several who give promise of becoming good teachers. It is difficult, however, to keep many of the most promising as long at school as they ought to be. There are but few inducements for the young women, especially, to go out as teachers; there is no place for them in the city schools, and they are afraid to go away from home. It would be well if some inducement were offered to residents of the counties to come to the city to prepare themselves to teach. A small addition to the

present appropriation of \$2,000, expended in paying part of the traveling expenses as is done in Pennsylvania, would probably yield good returns within a few years; and might be made to act as a stimulus to the county schools.

MANUAL TRAINING SCHOOL.

The Manual Training School of Baltimore was opened in March, 1884, with sixty-two pupils on the roll-during the first month. In September, the number was one hundred and fifty,-more than the school could properly accommodate. In September, 1885, the number was one hundred and twenty. As a full account of the school was given in the last annual report, it need not be repeated: here. It has been reported that the school is a failure. Nothing can be further from the truth; it has been a distinguished and pronounced success. A new enterprise like this cannot be perfect from the start; some mistakes must be made. Time must be allowed to detect the mistakes and remedy them. • There was no exemplar which the school could safely copy; it had to work out its own salvation. Unfortunately a disagreement arose between the director of the school and some members of the committee in charge. In consequence, the Board of School Commissioners appointed a new committee and a new director, and the work goes bravely on. Mistakes may be made again, and again repaired, but there will be no "failure."

MANUAL LABOR SCHOOL.

The Baltimore Manual Labor School for Indigent Boys was incorporated in 1840, and the first inmate was received in 1841. It is a bona fide farm school, a free boarding school for boys of good character whose relations are unable to provide for them. Here they receive the first rudiments of education, and in two or three years are apprenticed to a mechanic or a farmer, who agrees to support them until they are eighteen years of age. The aim of the school is to rescue homeless boys from the

danger of vicious associates and train them in habits of industry. There are forty boys between ten and fourteen years of age at the school, and the expense per capita is about \$125. The school receives \$2,000 a year from the State and \$1,500 from the city.

MCDONOGH INSTITUTE.

The McDonogh Institute was opened on the 22nd of November, 1873, and has now been for twelve years in successful operation. It was founded in accordance with one of the provisions of the will of John McDonogh, of New Orleans, (formerly of Baltimore) who left the bulk of his property to the cities of Baltimore and New Orleans for charitable purposes. His object, so far as Baltimore is concerned, was to give instruction "in Christian religion, a plain english education, music, and the art of husbandry or farming to poor boys of good character, of respectable associations in life, residents of the city of Baltimore." While the consequences of the war and tedious litigation seriously diminished the value of the bequest, still. the Institute has now in productive investments \$705,000. and in real estate, furniture, etc., an amount which makes the total value of the trust \$973,228.57. As a rule, improvments are paid for out of the interest, not from the capital, consequently the visible progress is rather sure There are now about sixty boys in attendance, than rapid. the whole cost of whose maintenance (board, lodging, clothing and tuition) is paid by the Institute, and it is proposed to admit ten more every year until the number reaches one hundred. The pressure for admission is very great, and entrance can now be secured only by competitive examination. The trustees have given a very liberal interpretation to John McDonogh's "plain English education." It includes Algebra, Geometry, Trigonometry, Surveying, Analytical Geometry, Zoology, Physiology, Botany, Drawing, Music and German. A bequest left by Dr. Zenus Barnum, amounting to \$80,000, will be used to establish a Manual Training School in connection with the ordinary work of the school. This experiment will be watched with profound interest, and it is hoped that the same success, which has followed the trustees thus far, may be achieved in this new effort.

SCHOOLS OF DESIGN.

The schools of design of the Maryland Institute for the Promotion of the Mechanic Arts, were largely attended during the past year; the day school by 267 students, mostly ladies, and the night school by 389 young men. The work of the day school is arranged in three regular classes, each taking one year. In the first year, students learn drawing in outline, elementary designing, geometry, perspective, light and shade drawing, and study forms of decorative and historical ornament. In the second year, they take up charcoal drawing of figures from the antique and portraits from life, also painting in water colors. The third year class learns painting in oil and modeling in clay. The classes in the night school, are known as the free-hand, the mechanical and architectural. At last commencement there were twenty-two students graduated from this school, six in the artistic division, nine in the architectural and seven in the mechanical. It is not easy to over estimate the importance of these schools to the prosperity of the State. A knowledge of drawing lies at the foundation of every mechanical employment. purchasers of manufactured goods, whether in cotton, in iron, or in silver, demand, now more than ever, artistic productions.

Without art-knowledge, artistic forms and combinations are impossible, and the schools of the Maryland Institute are the only resorts for art-culture, available to the people generally.

It is impossible that such an Institution should be entirely self-sustaining; it has rendered an ample return for the encouragement received from the State treasury, and it needs much additional encouragement either from public liberality or private beneficence, to enable it to continue the work so well begun.

ACADEMY OF SCIENCES.

Among the educational agencies of the State, the Academy of Sciences holds a prominent place. It was formed in 1859, by Philip T. Tyson, then state geologist, and a number of other gentlemen, who like him, were deeply interested in procuring a complete collection of the mineral resources of the state. Its aim has been extended from time to time, and every year has added to its collection, till now it embraces specimens of a large proportion of the most important mammals, birds, reptiles. fishes and crustacea, as well as of the minerals, metals, building stones and woods found in the State. But the practical value of the museum is lost through the want of a suitable building in which to arrange them, and expose them to observation. The quarters now occupied in the Athenaeum are entirely inadequate and of very uncertain tenure.

It is hoped that private beneficence, aided by the liberality of the State, will soon place the Academy in a position where its value as an educator will be realized, and where it will have scope for futher development.

INSTITUTION FOR THE INSTRUCTION OF THE BLIND.

The first "asylum" for the blind was founded by Duke Welf VI, at Meiningen in 1178, but it was not till near the close of the last century that any attempt was made to give systematic education to the blind. The invention of raised letters by Valentine Hauey in 1785, led to the establishment of the first school for the blind, about the same year in Paris. The first in England was commenced in 1791, and the first in the United States in 1832. The Maryland Institution was opened in 1862. It is purely educational in its character, and should be regarded as one of the public schools of the State, adapted to the wants of a special class of the juvenile population. It receives blind persons between the ages of 9 and 18, of good character, and free from disease. It gives them instruction in the ordinary branches of an English education, and in music, and also

in such mechanical occupations as they may be fitted for. Girls learn to sew and knit, to use the sewing machine, to mend clothing and perform many household duties. Boys learn to make brooms and mattresses, and to cane chairs.

There seems to be no good reason why children should not be admitted to the school for the blind at the same age as they can enter the public school. Many bad habits are learned between the the ages of six and nine, which many months of schooling fail to eradicate. A child is more teachable through his senses at six, than at nine. Kindergartens for blind children have been found to work well, and if a seeing child needs schooling from his sixth to his eighteenth year to fit him for the active business of life, how can it be expected that a blind child can accomplish the same object in three years less time?

The purpose of the school is to make the blind child self-sustaining, and if this were generally understood, there would be a much larger attendance. It is calculated that there are about twenty-five hundred blind children of school-going age in the United States, who do not receive any school instruction, and a due proportion of this number reside in Maryland.

The school for the "Colored Blind and Deaf Mutes" is now in its twelfth year, and yet not more than half of those entitled to its advantages, have availed themselves of its benefits. School commissioners and examiners throughout the State should direct the attention of those interested to the liberal provision that has been made by the State for the education of this class of the community.

SCHOOL FOR THE DEAF AND DUMB.

At the date of the last report received, there were 121 pupils in this school, and a careful investigation showed that there were twenty-five other deaf mutes who ought to have been sent to the school, but were not.

The age of admission is nine, as it is in the school for the blind, but it is hard to see why deaf-mutes should have three years less schooling than children who can hear and speak. A visit to the institution made by the teachers in attendance on the teachers' institute last fall, convinced them that the school was in the best of hands, that everything possible was being done to compensate these deaf mutes for the great loss they had sustained, that the instruction given them was based on right principles and conducted by right methods, that the physical health and comfort of the pupils were carefully studied, and their moral culture received its due share of attention.

THE PRATT LIBRARY.

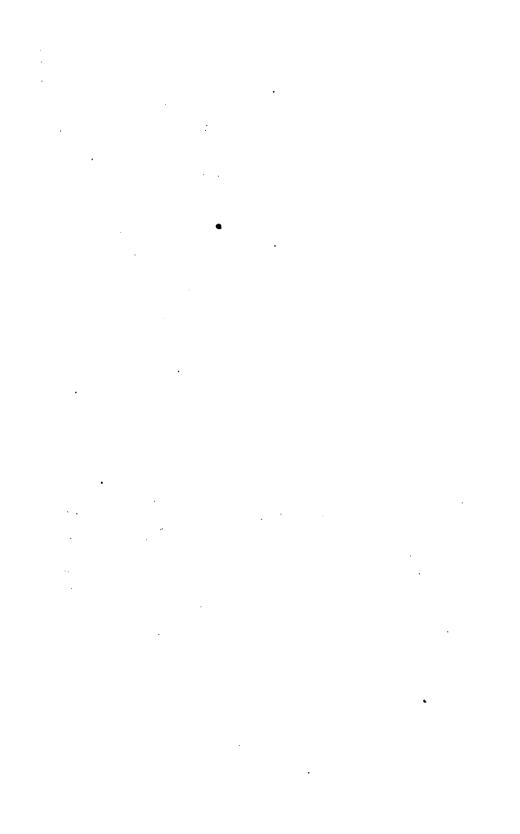

The educational history of the year would be very Incomplete, if no mention were made of the Enoch Pratt Free Library, which was incorporated the last General Assembly and opened to the public on the day before the meeting of the present General Assembly, January 4th, 1886. The amount expended on this magnificent enterprise is \$1,145,833.33. Of this sum, \$833,333.33 is given to the city of Baltimore, which contracts on its part to pay over annually to the trustees of the library \$50,000. remainder of the total amount mentioned has been expended in the erection of the central library building (\$250,000) and the four branch libraries (\$50,000) with the exception of a cash balance of \$12,500. The number of books at present collected is 32,000. Baltimere may well be grateful for the grand benefactions conferred on her citizens by George Peabody, Johns Hopkins and Enoch Pratt. The closing words of Mr. Pratt's brief presentation speech are well worth being repeated here: "Now in the hope of God's blessing, I hand it over to you, expecting you will foster, protect and increase it, that its beneficent influences may be for the benefit of the present and all future generations as long as our beloved city of Baltimore shall exist. My work is finished. satisfied."

The usual statistical tables are annexed, and in the ap-

pendix are the reports from the school commissioners of the city of Baltimore and the several counties.

Signed,

P. A. WITMER, JAS. L. BRYAN, Thos. C. Bruff, WIELTAM DALE, M. A. NEWELL, Secretary.

Notes.	3,947	44	
Balance cash on hand	76	40	
The Market of the Control of the Con		\$27,807	81

Last year in this part of my report, I stated that we paid an indebtedness of \$20,000. This amount, with the addition of \$1,000, includes the amount of indebtedness paid in the two schools years—1883—1884 and 1884—1885. This explanation will account for the increased expenditures set forth in the report.

^{*} The blanks had no column for ages and the teachers did not return ages.

SCHOOL-HOUSES BUILT OR ENLARGED DURING THE YEAR.

Two school-houses built or additions to them built during the year, but not at the cost of the Board. It was done by private enterprise; the County Commissioners promising to reimburse the gentlemen who did it, by annual levies until they are paid for. As I had nothing to do in paying for them, I have made no report of them in my accounts.
